

ABB MEASUREMENT & ANALYTICS | DATA SHEET

# ProcessMaster FEP630

## Electromagnetic flowmeter

---

## Measurement made easy

The first choice for all industrial applications

---

### **EtherNet/IP, ProfiNet®**

- Minimize commissioning and Start-up
- Configure the Device remotely
- Take advantage of the in-built device driver (EDS for EtherNet/IP™, GSDML for ProfiNet®) reducing integration cost
- Monitor your Process and the Flowmeter Status
- Diagnose your Process and the Flowmeter Status
- Verify the Flowmeter remotely

---

### **Diagnostics for real-life situations**

- To keep your process up and running
- Gas bubble, partial filling or empty pipe detection, electrode impedance, conductivity and sensor temperature monitoring
- Clear text messages for simplified troubleshooting

---

### **On board health check**

- Flowmeter sensor and transmitter integrity check utilizing fingerprint technology

---

### **Noise / Grounding check**

- Verify the installation is correct from day one

---

### **Service interval monitoring**

- Receive timed notifications

---

### **Backwards compatibility**

- Protect your investment in ABB flowmetering

## ProcessMaster series

ProcessMaster is available in two series – ProcessMaster 610 the good fit for everyday applications and ProcessMaster 630 the first choice for all process industry applications delivering best in class functionality and options.

Applicability	FEP610 series	FEP630 series
	Good fit for everyday applications	The first choice for all industrial applications
<b>Chemical Industry</b> Corrosive liquids, acids, bases	✓	✓
<b>Power</b> Coal slurry, Lime slurry, Cooling	✓	✓
<b>Mining</b> Abrasive slurries, hydraulic transport	✓	✓
<b>Pulp &amp; Paper</b> Stock Flows, Latex, Clay, Liquor, Chemicals	Up to 2 % Stock	Up to 4 % Stock
<b>Oil &amp; Gas</b> High pressure applications	✓	✓
<b>Food &amp; Beverage</b> Hygienic applications	✓	✓
<b>Measuring medium minimum conductivity</b>	20 µS/cm	5 µS/cm
<b>Measuring medium temperature</b>	Up to 130 °C (266 °F)	Up to 180 °C (356 °F)
<b>Pressure</b>	≤ PN 40 / CI 300	≤ PN 40 / CI 300, option for high pressure
<b>Hazardous area</b>	—	Yes

Features	FEP610 series	FEP630 series
<b>Accuracy</b>	0.5 %	0.4 %, Option up to 0.2 %
<b>Nominal diameter</b>	DN 3 to 2000 (1/8 to 80")	DN 3 to 2000 (1/8 to 80")
<b>Liner material</b>	PTFE, Rubber, PFA, ETFE	PTFE, Rubber, PFA, ETFE, Ceramic Carbide, Linatex
<b>I/O's</b>	1 x analog, 2 x digital	1 x analog, 2 x digital, option for add-in modules
<b>Communication</b>	High Speed Infrared Port Communication based on HART DTM	HART®, PROFIBUS DP®, PROFIBUS PA®, Modbus RTU®, Modbus TCP®, Ethernet IP®, ProfiNet®
<b>Process diagnostics</b>	Empty pipe	Empty pipe, Partially filling, Gas bubbles, Electrode Impedance, Conductivity, Sensor temperature
<b>Backwards compatibility</b>	—	Yes

## ... ProcessMaster series

### Features and Functions

#### On-board Health Check

ProcessMaster's in-built fingerprint technology helps to ensure Sensor and Transmitter Integrity without the need to remove the flowmeter from the process. The Check provides a pass / failed result based on a comparison of the current flowmeter status to a set of reference data.

#### Benefits:

- Easy to operate
- No additional equipment required
- No training necessary
- Quick check of flowmeter integrity

#### Backwards Compatibility saves your Investment in ABB Flowmetering

Take advantage of new features and improved performance. Switch to the new product at your own timeline. Minimize the cost of change in stock keeping, documentation and change of internal processes.

#### Benefits:

- Drop in replacement
- Same terminal designation I/O's, sensor connections
- No need to change wiring documentation
- Sensor cable stays unchanged
- Identical operating philosophy:  
Easy Set-up and Sensor Set-up
- Common user experience, less training
- Less inventory, less cost

#### Diagnostics for real-life situations

Detecting critical process conditions at an early stage helps reducing unscheduled downtime and maintenance. Clear text messages simplify troubleshooting.

Device diagnostic information can be accessed without any intervention – either through the HMI or bus communication.

#### Benefits:

- Peace-of-mind that flowmeter is operating within its specification
- Prioritized alarms to correct most important alarm first
- Through-the-glass operation without the need to open the housing

#### Verify the Installation is correct - from day one

Improving quality and reducing cost can be a challenge if the flow measurement is unstable. A proper grounding is fundamental to an accurate electromagnetic flow measurement. ProcessMaster's in-built noise / grounding check helps getting the wiring / grounding right from day one without the need for further Tools.

## Standard functionality

### Flowmeter sensor coil inductance

A measurement of the flowmeter sensor coil inductance can be triggered. This enables to check for the flowmeter sensor coil integrity.

### Noise check / Grounding check

This function allows checking for noise and proper electrical grounding of the device. While the check is in progress, no flow measurement can take place.

Pre-requisites using the functionality:

- Flowmeter sensor must be completely filled
- No flow must occur in the flowmeter sensor

### Fingerprint

The "fingerprint" database integrated in the transmitter allows for comparison of the values at the time of factory calibration or commissioning with the currently recorded values.

A quick "on-board health check" resulting in a pass / fail information can be performed.

For an in-depth verification, an external tool is available from ABB (in preparation).

### Detection of partial filling

A partially filled sensor affects the flowmeter reading and the measuring accuracy.

If the flowmeter sensor is ordered with a full pipe detection electrode, which is located at the Top of the sensor, the transmitter's '...Diagnosis Tfe' function enables for an alarm in case the sensor tube starts to become partially filled.

Pre-requisites using the functionality:

- Nominal diameter: > DN 50 (> 2")
- Flowmeter sensor design level A
- Conductivity of the measuring medium: 20 to 20000  $\mu\text{S}/\text{cm}$

Installation conditions:

- The flowmeter sensor must be installed horizontally with the terminal box pointing upward.

### Verification

There is an Option for an in-depth verification of the device using an external Tool from ABB.

This Tool provides a brief documentation of the Verification results allowing for a print out.

## ... ProcessMaster series

### ... Features and Functions

#### Optional diagnostic functions

The extended diagnostics functionality package contains the following functions.

#### Gasbubble detection

Gas bubbles in the measuring medium effect the flowmeter reading and the accuracy.

Enhanced diagnostics feature the option for gas bubble detection to make the flow measurement most reliable.

There is the option for a gas bubble alarm triggered once the actual gas bubble value exceeds the threshold configured.

This alarm is shown in the HMI. The digital output flags an alarm if configured accordingly.

Pre-requisites using the functionality:

- Nominal diameter: DN 10 to DN 300 (3/8 to 12 in).
- Conductivity of the measuring medium: 20 to 20000  $\mu\text{S}/\text{cm}$ .

Installation conditions:

- The flowmeter sensor can be installed either horizontally or vertically. Vertical installation is preferable.

#### Conductivity monitoring

The conductivity of the fluid can be monitored by setting minimum / maximum alarm thresholds.

Once alarm limits are exceeded, the digital output flags an alarm if configured accordingly.

The conductivity is available as 4 to 20 mA output (option card).

Pre-requisites using the functionality:

- Conductivity of the measuring medium: 20 to 20000  $\mu\text{S}/\text{cm}$ .

#### Electrode impedance

An Impedance measurement between the electrode and ground can be triggered.

This enables to check for the electrode integrity.

#### Flowmeter sensor temperature

A flowmeter sensor temperature measurement can be triggered.

This enables to check for the flowmeter sensor temperature.

With flowmeter sensor temperature out of spec, the digital output flags an alarm if configured accordingly.

#### Transmitter in-house temperature

Monitoring the temperature of the electronic unit in the transmitter triggers an alarm via the digital output, if configured.

In the '...Diagnosis Values', the current temperature as well as the smallest and largest previously measured temperature is displayed.

## Filling function

- |  |  |
|--|--|
| ① Supply tank  | VO Valve open<br>(filling started)         |
| ② Sensor   | VC Valve closed<br>(fill quantity reached) |
| ③ Start / stop fill operation<br>(digital input through plug-in<br>card) | t <sub>1</sub> Valve closing time          |
| ④ Fill valve   | t <sub>2</sub> Overrun time                |
| ⑤ Filling tank   |  |

Figure 1: FillMass fill function

The optional filling function allows filling with filling times > 3 seconds.

Filling quantity is configurable and the filling process can be started via the digital input (plug-in card).

As soon as the filling quantity has been reached, the valve can be closed via the digital output.

Filling quantity correction is calculated by measuring the overrun quantity.

Additionally, the low flow cut-off can be configured if required.

### Version in integral mount design

The transmitter and the flowmeter sensor form a single mechanical entity.

The transmitter is available in two housing designs:

- Single-compartment housing  
This is suited for use in ATEX/IEC Ex Zone 2, 22.  
In the single-compartment housing, the electronics chamber and the connection chamber in the transmitter are not separated from each other.
- Dual-compartment housing:  
This is suited for use in ATEX/IEC Ex Zone 2, 22.  
In the dual-compartment housing, the electronics chamber and the connection chamber in the transmitter are separated from each other.

#### Note

Further information on the Ex Approval of devices can be found in the type examination certificates or the relevant certificates at [www.abb.com/flow](http://www.abb.com/flow).

# Flowmeter sensor

## Measuring principle

Measurements performed by the electromagnetic flowmeter are based on Faraday's law of induction. A voltage is generated in a conductor when it moves through a magnetic field.

Figure 4: Electromagnetic flowmeter diagram

$U_1 \sim B \times D \times v$	$qv = \frac{D^2 \times \pi}{4} \times v$	$U_1 \sim qv$
$U_1$ Measuring span	$v$ Average flow velocity	
$B$ Magnetic induction	$qv$ Volume flow rate	
$D$ Electrode spacing		

With the device-relevant application of this measuring principle, a conductive measuring medium flows through a tube in which a magnetic field is generated perpendicular to the flow direction (see Figure 4).

The voltage induced in the measuring medium is tapped by two diametrically opposed electrodes. This measurement voltage is proportional to the magnetic induction, the electrode spacing and the average medium velocity  $v$ . Taking into account that the magnetic induction and the electrode spacing are constant values results in a proportion between the measurement voltage  $U_1$  and the average medium velocity.

From the calculation of the volume flow rate follows that the measurement voltage is linear and proportional to the volume flow rate.

The induced voltage is converted by the transmitter to standardized, analog and digital signals.

## Measuring accuracy

### Reference conditions

<b>Based on EN 29104</b>	
Temperature of medium being measured	20 °C (68 °F) ±2 K
Ambient temperature	20 °C (68 °F) ±2 K
Power supply	Nominal voltage acc. to name plate $U = \pm 1 \%$ ; frequency $f = \pm 1 \%$
Installation conditions	<ul style="list-style-type: none"> <li>Upstream: &gt; 10 x DN straight section</li> <li>Downstream: &gt; 5 x DN straight section</li> </ul>
Warm-up phase	30 minutes

### Measurement value deviation and reproducibility

#### Measuring error

- (A) Accuracy ± of measured value in %
- (B) Flow velocity  $v$  in m/s,  $Q / Q_{max}DN$  in %

Figure 5: Measuring error

### Impulse output

#### Standard calibration DN 3 to 2000

±0.4 % of measured value, ±0.02 %  $Q_{max}DN^*$

#### Optional calibration

DN 3 to 600, 800: ±0.3 % of measured value, ±0.02 %  $Q_{max}DN^*$

#### Or

DN 10 to 600, 800: ±0.2 % of measured value, ±0.02 %  $Q_{max}DN^*$

### Current output

Same as pulse output plus ±0.1 % of measured value ±0.01 mA

\*  $Q_{max}DN$ : See table in chapter **Measuring range table** on page 20.

### Repeatability, response time

Repeatability	Response time**
≤ 0.11 % of measured value, $t_{meas} = 100$ s,	As step function 0 ... 99 %
$v = 0.5 \dots 10$ m/s	$5 \tau \geq 200$ ms at 25 Hz excitation frequency
	$5 \tau \geq 400$ ms at 12.5 Hz excitation frequency
	$5 \tau \geq 500$ ms at 6.25 Hz excitation frequency

Table 1 Repeatability, response time

\*\* Of current output with damping of 0.04 seconds.

## ... Flowmeter sensor

### Permitted pipe vibration

In accordance with EN 60068-2-6

Applicable to sensors in remote mount design and sensors in integral mount design.

- Maximum deflection: 0.15 mm (0.006 in) in the frequency range of 10 to 58 Hz
- Maximum acceleration: 2 g in the frequency range of 58 to 150 Hz
- Maximum acceleration: 4g (Tested to DNV DNVGL-CG-0339-2019) for Devices specified with code 'CL5' in Modelcode. CL5 = DNV approved device.

### IP degree of protection

- IP 65 / IP 67 in accordance with EN 60529
- IP 68 in accordance with EN 60529 (for remote mount design only)
- NEMA 4X

### Signal cables

For remote mount design only.

The maximum signal cable length between flowmeter sensor and transmitter is 200 m (656 ft).

A 5 m (16.4 ft) cable is included in the scope of delivery.

If more than 5 m (16.4 ft) is required, the cable can be ordered separately – see **Accessories** on page 90.

For marine applications, a certified signal cable is available.

### Temperature data

#### Storage temperature range

–40 to 70 °C (–40 to 158 °F)

The temperature range offered by the device is dependent on a number of different factors.

These factors include the measuring medium temperature  $T_{\text{medium}}$ , the ambient temperature  $T_{\text{amb}}$ , operating pressure  $P_{\text{medium}}$ , liner material and the approval for explosion protection.

#### Maximum permissible cleaning temperature

CIP media	Liner	Cleaning temperature
Steam	PTFE, PFA	150 °C (302 °F)
Cleaning fluid	PTFE, PFA	140 °C (284 °F)

- The maximum cleaning temperature specified applies to a maximum ambient temperature of 25 °C (77 °F). If the ambient temperature up-scales > 25 °C (> 77 °F), then the temperature difference to the current temperature must be subtracted from the max. cleaning temperature.
- The specified cleaning temperature may have an effect for a maximum of 60 minutes.

## Maximum ambient temperature depending on measuring medium temperature

### Note

When using the device in potentially explosive atmospheres, note the additional temperature data in the chapter entitled **Operation in Zone 1, 21** on page 63 and chapter **Operation in Zone 2, 22** on page 68.

### Integral mount design

## Process connections

For an overview of available process connection versions, see **Overview – models without hazardous area approval** on page 8.

## Installation length

The sensor installation length is based on ISO 13359.  
For further details, refer to chapter **Dimensions** on page 29.

## Materials

### Wetted parts

Part	Standard	Option
Liner material	PTFE, PFA, ETFE, hard rubber, soft rubber	Ceramic Carbide, Linatex

### Measurement and grounding electrode for liner material

• Hard rubber	SST 1.4571 (AISI 316Ti)	Hastelloy B-3 (2.4600), Hastelloy C-4 (2.4610), titanium, Tantalum, Platinum-iridium, SST 1.4539 (AISI 904L)
• Soft rubber		
• PTFE, PFA, ETFE	SST 1.4539 (AISI 904L)	SST 1.4571 (AISI 316Ti), Hastelloy B-3 (2.4600), Hastelloy C-4 (2.4610), Titanium, Tantalum, Platinum-iridium

Grounding ring	Stainless steel	On request
Protection plate	Stainless steel	On request

### Non-wetted parts (process connection), Design level 'A'

DN	Standard	Option
DN 3 to 15 (1/10 to 1/2")	Stainless steel <sup>1)</sup>	–
DN 20 to 400 (3/4 to 16")	Steel (galvanized) <sup>2)</sup>	Stainless steel <sup>1)</sup>
DN 450 to 2000 (18 to 80")	Steel (painted) <sup>2)</sup>	–

The process connections are made of one of the materials listed below:

- 1.4301 (AISI 304), 1.4307, 1.4404 (AISI 316L) 1.4435 (AISI 316L), 1.4541 (AISI 321) 1.4571 (AISI 316Ti)
- 1.0038, 1.0460, 1.0570, 1.0432, ASTM A105, Q255A, 20#, 16Mn

### Sensor housing, Design level 'A'

Part / DN	Material
<b>Housing</b>	
DN 3 to 400 (1/10 to 16")	Cast aluminum (painted) Paint coat: ≥ 80 µm thick, RAL 9002
DN 450 to 2000 (18 to 80")	Welded steel design (painted) Paint coat: ≥ 80 µm thick, RAL 9002
<b>Meter tube</b>	Stainless steel <sup>1)</sup>
<b>Terminal box</b>	Aluminum alloy, painted, ≥ 80 µm thick, light gray, RAL 9002 Option: Plastic, gray white, RAL 9002 Option: Stainless Steel
<b>Cable gland <sup>2)</sup></b>	Polyamide, stainless Steel <sup>3)</sup>

The meter tube is made of one of the materials listed below:

- 1) 1.4301, 1.4307, 1.4404, 1.4435, 1.4541, 1.4571  
ASTM materials:  
Grade TP304, TP304L, TP316L, TP321, TP316Ti, TP317L, 0Cr18Ni9, 00Cr18Ni10, 0Cr17Ni14Mo2, 0Cr27Ni12Mo3, 0Cr18Ni10Ti
- 2) Cable gland with M 20 x 1.5 or NPT thread, to be selected via the order number.
- 3) In the case of explosion-proof design or for ambient temperature of -40 °C (40 °F).

## ... Flowmeter sensor

### Material load for process fittings

The limits of the permissible measuring medium temperature ( $T_{medium}$ ) and permissible pressure ( $P_{medium}$ ) are calculated on the basis of the liner and flange material used in the device (see device name plate).

#### Minimum permissible operating pressure

The following tables show the permissible minimum operating pressure ( $P_{medium}$ ) as a function of the measuring medium temperature ( $T_{medium}$ ) and the liner material.

#### Design Level 'A'

Lining material	Nominal diameter	$P_{medium}$ [mbar abs]	$T_{medium}^*$
Hard rubber	DN 25 to DN 2000 (1 to 80")	0	< 85 °C (185 °F)
			< 80 °C (176 °F)**
Soft rubber	DN 50 to DN 2000 (2 to 80")	0	< 60 °C (140 °F)
PTFE	DN 10 to DN 600 (3/8 to 24")	270	< 20 °C (68 °F)
		400	< 100 °C (212 °F)
		500	< 130 °C (266 °F)
Thick PTFE	DN 25 to DN 80 (1 to 3")	0	< 180 °C (356 °F)
	DN 100 to DN 250 (4 to 10")	67	< 180 °C (356 °F)
	DN 300 (12")	27	< 180 °C (356 °F)
PFA	DN 3 to DN 200 (1/4 to 8")	0	< 180 °C (356 °F)
ETFE	DN 25 to DN 600 (1 to 24")	100	< 130 °C (266 °F)
Ceramic carbide	DN 25 to DN 1000 (1 to 40")	0	< 80 °C (176 °F)
Linatex**	DN 50 to DN 600 (6 to 24")	0	< 70 °C (158 °F)

\* For CIP/SIP cleaning, higher temperatures are permitted for limited time periods; refer to **Maximum permissible cleaning temperature** on page 16.

\*\* Only for China production site

Installation conditions

General

The following points must be observed during installation:

- The flow direction must correspond to the marking, if present
- The maximum torque for all flange screws must be complied with
- Secure flange screws and nuts against pipe vibration.
- The devices must be installed without mechanical tension (torsion, bending)
- Install flange devices / wafer-type devices with plane parallel counterflanges and use appropriate gaskets only
- Use gaskets made from a material that is compatible with the measuring medium and measuring medium temperature.
- Gaskets must not extend into the flow area, since possible turbulence could influence the accuracy of the device
- The piping may not exert any inadmissible forces or torques on the device.
- Make sure that the temperature limits are not up-scaled during operation of the device.
- Vacuum shocks in the piping should be avoided to prevent damage to the liners (PTFE liner). Vacuum shocks can destroy the device.
- Do not remove the sealing plugs in the cable glands until you are ready to install the electrical cable
- Make sure the gaskets for the housing cover are seated correctly. Carefully seal the cover. Tighten the cover fittings
- The transmitter with a remote mount design must be installed at a largely vibration-free location
- Do not expose the transmitter and sensor to direct sunlight. Provide appropriate sun protection as necessary. If necessary, provide a suited means of sun protection.
- When installing the transmitter in a control cabinet, make sure adequate cooling is provided

Devices with extended diagnostic functions

For devices with extended diagnostic functions different installation conditions may be valid.

For additional information, see **Optional diagnostic functions** on page 6.

## Brackets

### NOTE

#### Potential damage to device!

Improperly placed support structures can result in a deformed housing and damage to the inner solenoids. Place the support structures at the edge of the transmitter housing (see arrows in **Figure 14**).

Figure 14: Support for nominal diameters greater than DN 400

Devices with nominal diameters larger than DN 400 must be mounted on a sufficiently strong foundation with support.

## Gaskets

The following points must be observed when installing gaskets:

- To achieve the best results, make sure that the gaskets and meter tube fit concentrically.
- To make sure that the flow profile is not distorted, the gaskets may not intrude in the piping cross-section.
- The use of graphite with the flange or process connection gaskets is prohibited. This is because, in some instances, an electrically conductive coating may form on the inside of the meter tube.
- For Non RTJ flange type sensors used in high pressure installations (PN63, CL600 and up), ensure using an appropriate gasket.

## Flow direction

Figure 15: Flow direction

The device measures the flow rate in both flow directions. Forward flow is the factory setting, as shown in Figure 15.

## Electrode axis

Figure 16: Orientation of the electrode axis

The electrode axis ① should be horizontal if at all possible or no more than 45° from horizontal.

## ... Flowmeter sensor

### ... Installation conditions

#### Mounting position

Figure 17: Mounting position

- (A) Vertical installation for measuring abrasive materials, preferably with flow in upward direction.
- (B) For a horizontal installation, the meter tube must always be completely filled with the measuring medium. Provide for a slight incline of the connection for degassing.

#### Minimum spacing of the devices

ProcessMaster FEPxxx

Spacing  $D: \geq 1.0 \text{ m}$  (3.3 ft) for Design Level 'A'

Figure 18: Minimum spacing of the devices

- In order to prevent the devices from interfering with each other, a minimum distance as presented in **Figure 18** must be maintained between the devices.
- The sensor must not be operated in the vicinity of powerful electromagnetic fields, e.g., motors, pumps, transformers, etc. A minimum spacing of approx. 1 m (3.28 ft) must be maintained.
- For installation on or to steel parts (e.g. steel brackets), a minimum spacing of 100 mm (3.94 in) must be maintained (based on IEC801-2 and IECTC77B).

#### Inlet and outlet sections

- ① Double elbow
- ② Turn-off device

Figure 19: Inlet and outlet section, turn-off devices

The measuring principle is independent of the flow profile as long as standing eddies do not extend into the measured value formation, such as may for example occur after double elbows, in the event of tangential inflow, or where half-open gate valves are located upstream of the sensor. In such cases, measures must be put in place to normalize the flow profile.

- (A) Do not install fittings, manifolds, valves, etc., right before the flowmeter sensor.
- (B) Inlet / outlet sections: length of the straight piping upstream and downstream on the sensor. Experience has shown that, in most installations, straight inlet sections  $3 \times \text{DN}$  long and straight outlet sections  $2 \times \text{DN}$  long are sufficient (DN = nominal diameter of the flowmeter sensor). For test stands, the reference conditions of  $10 \times \text{DN}$  straight inlet and  $5 \times \text{DN}$  straight outlet must be provided, in accordance with EN 29104 / ISO 9104. Valves or other turn-off devices should be installed in the outlet section. Valve flaps must be installed so that the valve damper plate does not extend into the flowmeter sensor.

**Free inlet or outlet**

Figure 20: Free inflow and outflow

- (A) For a free outflow, do not install flowmeter at the highest point of the piping or on its outflow side, since the measuring tube may run empty, creating air bubbles.
- (B) For free inflow/outflow, provide an invert to make sure that the piping is always full

**Mounting with heavily contaminated measuring media**

Figure 21: Bypass line

For strongly contaminated measuring media, a bypass line in accordance with the figure is recommended so that operation of the system can continue to run without interruption during mechanical cleaning.

**Sensor insulation**

Figure 22: Insulation of the flowmeter sensor

The high temperature design allows for complete thermal insulation of the flowmeter sensor. The pipeline and sensor must be insulated ① after installing the unit according to the illustration.

**Grounding**

The flowmeter sensor must be connected to ground potential. For technical reasons, this potential must be identical to the potential of the measuring medium. For plastic or insulated lined pipelines, the measuring medium is grounded by installing ground plates. When there are stray potentials present in the pipeline, a ground plate is recommended on both ends of the flowmeter sensor.

... Flowmeter sensor

... Installation conditions

Mounting with pipe vibration

- ① Pump
- ② Damping device
- ③ Shut-off device

Figure 23: Vibration damping

Strong vibrations in the pipeline must be damped using flexible damping devices.

The damping devices must be installed beyond the supported flowmeter section and outside of the section between the shut-off devices.

Do not connect flexible damping devices directly to the flowmeter sensor.

Installation in piping with larger nominal diameter

- ① Reducer

Figure 24: Using reducers

Determine the resulting pressure loss when using reducers:

1. Determine diameter ratios  $d/D$ .
2. Determine the flow velocity based on the flow rate nomogram (Figure 25).
3. Read the pressure loss on the Y-axis in Figure 25.

Figure 25: Flow rate nomogram for flange transition piece at  $\alpha/2 = 8^\circ$

High pressure sensors (PN63, CI600 and up)

With sensors, designed for higher pressure rating, the inner diameter of the sensor might be different from the attached pipe – see dimensions table.

### Dimensions

Flange DN 3 to 100 (1/16 to 4"), aluminum sensor housing (shell housing) — Design level 'A'

All specified dimensions and weights are in mm (inch) or kg (lb). The stated weights are approximate; the maximum weight is always stated.

#### Integral mount design

#### Remote mount design

- ① Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

Figure 26: Integral mount design (top), remote mount design (bottom)

Tolerance for L: DN 150 to 200: +0 / -3 mm (+0 / -0,018 in), DN 250 to 400: +0 / -5 mm (+0 / -0,197 in)

- 1) Other pressure ratings on request.
- 2) If a grounding ring is fitted is fitted (attached to one side of the flange) dimension L increases by 5 mm (0.197 in).
- 3) If protection plates are fitted (attached to both sides of the flange) dimension L increases by 10 mm (0.394 in).
- 4) For devices in high-temperature design, dimension F, F1, F2 increases by +127 mm (+5.0 in).
- 5) Depending on the device design, the dimensions change according to the following table:

Device design		Dimension F, F1	Dimension F2
Without explosion protection	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 in)	+127 mm (+5 in)
Explosion protection Zone 1, Div. 1	Standard sensor design	+74 mm (+2.91 in)	+47 mm (+1.85 in)
	High-temperature sensor design	+127 mm (+5 in)	+174 mm (+6.85 in)
Explosion protection Zone 2, Div. 2	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 in)	+127 mm (+5 in)

**Flange DN 450 to 2000 (18 to 80"), steel sensor housing - Design level 'A.**

All specified dimensions and weights are in mm (in) or kg (lb). The stated weights are approximate; the maximum weight is always stated.

**Integral mount design**

**Remote mount design**

- ① Transport lugs
- ② Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

**Figure 28: Integral mount design (top), remote mount design (bottom)**

Tolerance Di: ETFE Liner: +1/ -5 mm (+1/ -0,197 in) Hardrubber: +1/ -3 mm (+1/ -0.118 in

All pressure ratings (PN63, PN100, CL600 to CL2500 available with Hardrubber and ETFE only

1) Other pressure ratings on request.

2) If a grounding ring is fitted (attached to one side of the flange), dimension L increases as follows: by 3 mm (0.118 in) for DN 3 to 100, and by 5 mm (0.197 in) for DN 125.

3) Depending on the device design, the dimensions change according to the following table:

**Dimensions - Flange device DN 25 to 50, high pressure design, aluminum sensor housing (shell housing) — Design level 'A'**

Device design		Dimension F, F1	Dimension F2
Without explosion protection	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 in)	+127 mm (+5 in)
Explosion protection Zone 1, Div. 1	Standard sensor design	+74 mm (+2.91 in)	+47 mm (+1.85 in)
	High-temperature sensor design	+127 mm (+5 in)	+174 mm (+6.85 in)
Explosion protection Zone 2, Div. 2	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 in)	+127 mm (+5 in)

## Transmitter

### Features

- 4 to 20 mA current output
- Current output in the event of an alarm can be configured to 21 to 22.6 mA (NAMUR NE43)
- Measuring range: Can be configured between 0.02 to  $2 \times Q_{\max DN}$
- Operating mode for flow measurement can be configured
- Programmable digital output. Can be configured as frequency output, pulse output or binary output.
- Two slots for optional plug-in cards for retrofitting additional current / digital outputs or a digital input.
- Damping: 0.04 to 100 s configurable ( $1 \tau$ )
- Low flow cut-off: 0 to 20 % for current and pulse output
- Parameterization by means of HART communication
- Empty pipe detection\*
- Simulation of current and binary output (manual process execution)

\* Requirements for Empty Pipe detector function:  
The conductivity of the fluid must be  $\geq 20 \mu S/cm$   
Nominal diameter must be  $\geq DN 10$

### LCD indicator (option)

- High-contrast LCD indicator
- Display of the current flow rate as well as the total flow rate
- Application-specific visualizations which the user can select. Two operator pages can be configured to display multiple values in parallel.
- Plain text fault diagnostics
- Menu-guided parameterization with four buttons
- 'Easy Set-up' function for fast commissioning
- Parameterization of the device through the front glass with the housing closed

### Isolation of outputs

The digital output terminals 41 / 42 and 51 / 52 have a common ground.

The current output and the digital outputs are electrically isolated from each other.

### Optional plug-in cards

The transmitter has two slots (OC1, OC2) into which plug-in cards can be inserted to provide additional inputs and outputs.

The slots are located on the transmitter motherboard and can be accessed after removing the front housing cover.

Figure 32: Plug-in cards

Plug-in card	Quantity*
① Current output, 4 to 20 mA passive (red) Order no.: 3KQZ400029U0100	2
② Passive digital output (green) Order no.: 3KQZ400030U0100	1**
③ Passive digital input (yellow) Order no.: 3KQZ400032U0100	1
④ 24 V DC voltage supply (blue) Order no.: 3KQZ400031U0100	1
⑤ Modbus RTU® RS485 (white) Order no.: 3KQZ400028U0100	1
⑥ PROFIBUS DP® (white) Order no.: 3KQZ400027U0100	1
⑦ Ethernet (various protocols) Order no.: 3KQZ400037U0100	1
⑧ Power over Ethernet (POE) Order no.: 3KQZ400039U0100	1
⑨ PROFIBUS PA® (blue) Order no.: 3KQZ400061U0100	1

\* The 'Number' column indicates the maximum number of plug-in cards of the same type that can be used.

\*\* Only one plug-in card of the passive digital output type can be inserted in Pos. ②.

## IP degree of protection

In accordance with EN 60529: IP 65 / IP 67, NEMA 4X

## Vibration

In accordance with EN 60068-2-6

- In the 10 to 58 Hz range, maximum deflection 0.15 mm (0.006 in.)\*
- In the range from 58 to 150 Hz, maximum acceleration 2 g\*

\* Peak load

## Temperature data

	Standard	Optional
Ambient temperature	-20 to 60 °C (-4 to 140 °F)	-40 to 70 °C (-40 to 158 °F)
Storage temperature	-20 to 70 °C (-4 to 158 °F)	—

### Note

When operating below -20 °C (-4 °F), the LCD display can no longer be read. Full functionality is assured at temperatures above -20 °C (-4 °F).

### Integral mount design

Housing	Cast aluminum, painted
Paint	≥ 80 µm thick, RAL 9002 (gray white)
Cable gland*	Polyamide, M20 x 1.5 or ½ in. NPT
	Stainless steel**, M20 x 1.5 or ½ in. NPT

### Remote mount design

Housing	Cast aluminum, painted
Paint	≥ 80 µm thick, RAL 9002 (gray white)
Cable gland*	Polyamide, M20 x 1.5 or ½ in. NPT
	Stainless steel**, M20 x 1.5 or ½ in. NPT
Weight	4.5 kg (9.92 lb)

\* Cable gland with M 20 x 1.5 or NPT thread, to be selected via the order number.

\*\* On explosion-proof design for ambient temperature of -40 °C (-40 °F).

## ... Transmitter

### Dimensions

- ① Hole pattern for mounting holes  
 ② Female thread (either ½ in NPT or M20 × 1.5), see model coding. In the case of a ½ in NPT, there is a plug instead of a cable gland.

Figure 33: Mounting dimensions dual-compartment housing

- ① Hole pattern for mounting holes  
 ② Female thread (either ½ in NPT or M20 × 1.5), see model coding. In the case of a ½ in NPT, there is a plug instead of a cable gland.

Figure 34: Mounting dimensions single-compartment housing

# Electrical connections

## Connection diagram

(A) Connections for power supply and inputs / outputs

(B) Connections for signal cable (remote mount design only)

Figure 35: Electrical connections

### Note

For detailed information about grounding the transmitter and the flowmeter sensor, please refer to chapter 'Grounding' in the Commissioning instruction or the operating instruction.

### Connections for the power supply

AC voltage	
Terminal	Function / comments
L	Phase
N	Neutral conductor
PE / ⊕	Protective earth (PE)
▽	Potential equalization

DC voltage	
Terminal	Function / comments
1+	+
2-	-
PE / ⊕	Protective earth (PE)
▽	Potential equalization

### Connections for inputs and outputs

Terminal	Function / comments
Uco / 32	Current output 4 to 20 mA- / HART® output, active or
31 / 32	Current output 4 to 20 mA- / HART® output, passive
41 / 42	Passive digital output DO1
51 / 52	Passive digital output DO2
V1 / V2	Plug-in card, slot OC1
V3 / V4	Plug-in card, slot OC2

For details, see **Optional plug-in cards** on page 48.

### Connecting the signal cable

Only for remote mount design.

The sensor housing and transmitter housing must be connected to potential equalization.

Terminal	Function / comments
U <sub>FE</sub>	Sensor power supply
GND	Ground
A	Data line
B	Data line
⊕	Functional earth / Shielding

## ... Electrical connections

### Electrical data for inputs and outputs

#### Power supply

##### AC power supply

Terminals	L / N
Operating voltage	100 to 240 V AC (-15 % / +10 %), 47 to 64 Hz
Power consumption	$S_{max}$ : < 20 VA
Power-up current	18.4 A, $t < 3$ ms

##### DC voltage supply

Terminals	1+ / 2-
Operating voltage	16.8 to 30 V DC
Ripple	< 5 %
Power consumption	$P_{max}$ : < 20 W
Power-up current	21 A, $t < 10$ ms

#### HART communication

A HART DTM in accordance with FDT1.2 standards is available. HART protocol based Integrations in other Tools or systems (e.g., Emerson AMS/Siemens PCS7) are available on request. The DTM, the DD and EDD is available for download from [www.abb.com/flow](http://www.abb.com/flow).

##### HART output

Terminals	Active: Uco / 32 Passive: 31 / 32
Protocol	HART 7.1
Transmission	FSK modulation on current output 4 to 20 mA in accordance with Bell 202 standard
Baud rate	1200 baud
Signal amplitude	Maximum 1.2 mAss
Current output load	Minimum 250 $\Omega$
Cable	0,25 mm <sup>2</sup> (AWG 24), twisted
Maximum cable length	1200 m (3937 ft)

For information on communication via the HART protocol, refer to HART® communication in Operating Instruction OI/FEP630/FEH630.

#### Current output Uco / 32, 31 / 32

Can be configured for outputting mass flow and volume flow via the on-site software.

(A) Current output Uco / 32, active (B) Current output 31 / 32, passive

Figure 36: (I = internal, E = external,  $R_B$  = load)

Permissible source voltage  $U_q$  for passive outputs in relation to load resistance  $R_B$  where  $I_{max} = 22$  mA. ■ = Permissible range

Figure 37: Source voltage for passive outputs

	Active	Passive
Current output		
Terminals	Uco / 32	31 / 32
Output signal	4 to 20 mA or 4 to 12 to 20 mA switchable	4 to 20 mA
Load $R_B$	$250 \Omega \leq R_B \leq 300 \Omega$	$250 \Omega \leq R_B \leq 600 \Omega$
Source voltage $U_q$ *	—	$13 V \leq U_q \leq 30 V$
Measuring error	< 0.1 % of measured value	
Resolution	0.4 $\mu$ A per digit	
Insulation	The current output and digital outputs are electrically isolated.	

\* Source voltage  $U_q$  depends on the load  $R_B$  and must be within the permissible range.

For information on communication via the HART protocol, refer to HART® Communication on page 58.

**Digital output 41 / 42, 51 / 52 (basic device)**

Can be configured as pulse, frequency or binary output via on-site software.

(A) Digital output 41 / 42, 51 / 52 passive as a pulse or frequency output  
 (B) Passive digital output 51 / 52 as binary output

Figure 38: (I = internal, E = external, RB = load)

Pulse / frequency output (passive)	
Terminals	41 / 42, 51 / 52
Output 'closed'	0 V ≤ U <sub>CEL</sub> ≤ 3 V For f < 2.5 kHz: 2 mA < I <sub>CEL</sub> < 30 mA For f > 2.5 kHz: 10 mA < I <sub>CEL</sub> < 30 mA
Output 'open'	16 V ≤ U <sub>CEH</sub> ≤ 30 V DC 0 mA ≤ I <sub>CEH</sub> ≤ 0.2 mA
f <sub>max</sub>	10.5 kHz
Pulse width	0.05 to 2000 ms
Binary output (passive)	
Terminals	41 / 42, 51 / 52
Output 'closed'	0 V ≤ U <sub>CEL</sub> ≤ 3 V 2 mA ≤ I <sub>CEL</sub> ≤ 30 mA
Output 'open'	16 V ≤ U <sub>CEH</sub> ≤ 3 V DC 0 mA ≤ I <sub>CEH</sub> ≤ 0.2 mA
Switching function	Can be configured using software.

**Note**

- Terminals 42 / 52 have common grounding. Digital outputs 41 / 42 and 51 / 52 are not electrically isolated from each other. An electrically isolated digital output can be made using a plug-in module.
- If using a mechanical counter, it is advisable to set a pulse width of ≥ 30 ms and a maximum frequency of f<sub>max</sub> ≤ 3 kHz.

**Current output V1 / V2, V3 / V4 (plug-in module)**

Up to two additional plug-in modules can be implemented via the 'Passive current output (red)' option module.

(A) Current output V1 / V2, passive (B) Current output V3 / V4, passive

Figure 39: (I = internal, E = external, RB = load)

The plug-in module can be used in slot OC1 and OC2.

Permissible source voltage U<sub>q</sub> for passive outputs in relation to load resistance R<sub>B</sub> where I<sub>max</sub> = 22 mA. ■ = Permissible range

Figure 40: Source voltage for passive outputs

Passive current output	
Terminals	V1 / V2, V3 / V4
Output signal	4 to 20 mA
Load R <sub>B</sub>	250 Ω ≤ R <sub>B</sub> ≤ 600 Ω
Source voltage U <sub>q</sub> *	13 V ≤ U <sub>q</sub> ≤ 30 V
Measuring error	< 0.1 % of measured value
Resolution	0.4 μA per digit

\* The source voltage U<sub>q</sub> is dependent of the load R<sub>B</sub> and must be placed in an additional area.

## ... Electrical connections

### ... Electrical data for inputs and outputs

#### Digital output V1 / V2, V3 / V4 (plug-in card)

The 'digital output passive (green)' plug-in card can be used to create **one** additional binary output.

Figure 41: Plug-in card as binary output (I = internal, E = external,  $R_b$  = load)

The plug-in module can be used in slot OC1 or OC2.

#### Binary output (passive)

Terminals	V1 / V2, V3 / V4
Output 'closed'	$0 \text{ V} \leq U_{\text{CEL}} \leq 3 \text{ V}$ $2 \text{ mA} < I_{\text{CEL}} < 30 \text{ mA}$
Output 'open'	$16 \text{ V} \leq U_{\text{CEH}} \leq 30 \text{ V DC}$ $0 \text{ mA} \leq I_{\text{CEH}} \leq 0,2 \text{ mA}$
Switching function	Parameterization possible.

#### Note

$I_{\text{CEL}} < 30 \text{ mA}$ ;  $R_b = U_{\text{CEH}} / I_{\text{CEL}}$

- $R_b$  depends in the inner resistance of the DCS Input Card.  
 $R_b$  must be installed in case the inner resistance of the DCS Input Card does not limit  $I_{\text{CE}}$  to max. 30 mA.
- With the NAMUR switch set to 'On'  $R_b$  is not required.

#### Digital input V1 / V2, V3 / V4 (plug-in card)

A digital input can be implemented via the 'Passive digital input (yellow)' plug-in card.

Figure 42: Plug-in card as digital input (I = internal, E = external)

The plug-in card can be used in slot OC1 or OC2.

#### Digital input

Terminals	V1 / V2, V3 / V4
Input 'On'	$16 \text{ V} \leq U_{\text{KL}} \leq 30 \text{ V}$
Input 'Off'	$0 \text{ V} \leq U_{\text{KL}} \leq 3 \text{ V}$
Internal resistance $R_i$	6.5 k $\Omega$
Function	Parameterization possible.

**24 V DC loop power supply (plug-in card)**

Use of the 'loop power supply (blue)' plug-in card allows a passive output on the transmitter to be used as an active output. See also **Connection examples** on page 56.

Figure 43: (I = Internal, E = External)

The plug-in card can only be used in slot OC1.

Loop power supply 24 V DC	
Terminals	V1 / V2
Function	For active connection of passive outputs
Output Voltage	24 V DC at 0 mA, 17 V DC at 25 mA
Load rating $I_{max}$	25 mA, permanently short circuit-proof

**Note**

If the device is used in potentially explosive atmospheres, the plug-in card for the loop power supply may only be used to supply a passive output. It is not allowed, to connect it to multiple passive outputs!

**Modbus® / PROFIBUS DP/PA® interface V1 / V2 (plug-in card)**

A Modbus or PROFIBUS DP/PA interface can be implemented by using the 'Modbus RTU, RS485 (white)' or 'PROFIBUS DP, RS485 (white)' or 'PROFIBUS PA, RS485 (blue)' plug-in cards.

Figure 44: Plug-in card as a Modbus / PROFIBUS DP/PA interface (I = internal, E = external)

The corresponding plug-in card can only be used in slot OC1.

For information on communication through the Modbus or PROFIBUS DP/PA protocols, refer to chapters **Modbus® communication** on page 58 or **PROFIBUS DP® communication** on page 59 or **Bus topology** on page 60.

**PROFIBUS PA connection via M12-Plug**

Only in non-hazardous areas!

Figure 45: Pin assignment\* PROFIBUS PA M12-Plug (option)

## ... Electrical connections

### ... Electrical data for inputs and outputs

#### Connection examples

Input and output functions are configured via the device software in accordance with the desired application.

#### Digital output 41 / 42, 51 / 52, V3 / V4 active

When the 'loop power supply 24 V DC (blue)' plug-in card is used, the digital outputs on the basic device and on the option modules can also be wired as active digital outputs.

#### Note

Each 'loop power supply (blue)' plug-in card must only power one output.

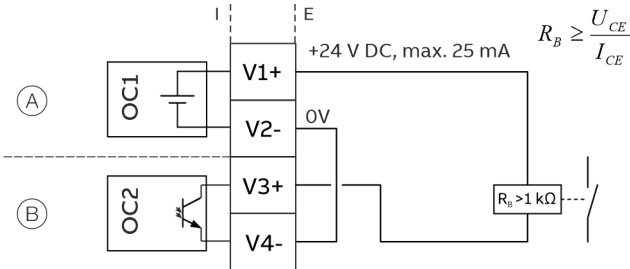

It must not be connected to two outputs (for example digital output 41 / 42 and 51 / 52)!

- (A) 'Loop power supply (blue)' plug-in card in slot 1
- (B) Digital output, digital output 41 / 42

Figure 46: Active digital output 41 / 42 (example)

The connection example shows usage for digital output 41 / 42; the same applies to usage for digital output 51 / 52.

- (A) 'Loop power supply (blue)' plug-in card in slot 1
- (B) 'Digital output (green)' plug-in card in slot 2

Figure 47: Active digital output V3 / V4 (example)

#### Digital output 41 / 42, 51 / 52 passive on distributed control system

- (A) Transmitter
- (B) Distributed control system / Memory programmable controller
- Ex. 2 Input 2
- $R_X$  Resistor for current limitation
- $R_I$  Distributed control system internal resistance

Ex. 1 Input 1

Figure 48: Digital output 41 / 42 on distributed control system (example)

The  $R_X$  resistors limit the maximum current through the optoelectronic coupler of the digital outputs in the transmitter.

The maximum permissible current is 25 mA. An  $R_X$  value of  $1000 \Omega / 1 \text{ W}$  is recommended at a voltage level of 24 V DC. The input on the distributed control system is reduced from 24 V DC to 0 V DC (falling edge) with '1' at the digital output.

**Current output V3 / V4 active**

When the 'loop power supply 24 V DC, blue' plug-in card is used, the current output on the plug-in card can also be wired as the active current output.

- (A) 'Loop power supply (blue)' plug-in card in slot 1
- (B) 'Passive current output (red)' plug-in card in slot 2

Figure 49: Active current output V3 / V4 (example)

**Digital input V3 / V4 active**

When the 'loop power supply 24 V DC, blue' plug-in card is used, the current output on the plug-in card can also be wired as the active current output.

- (A) 'Loop power supply (blue)' plug-in card in slot 1
- (B) 'Passive digital input (yellow)' plug-in card in slot 2

Figure 50: Active digital output V3 / V4 (example)

**Connection versions digital output 41 / 42, 51 / 52**

Depending on the wiring of digital outputs DO 41 / 42 and 51 / 52, they can be used parallel or only individually. The electrical isolation between the digital outputs also depends on the wiring.

Figure 51: Connection versions digital output 41 / 42 and 51 / 52

	DO 41 / 42 and 51 / 52 can be used parallel	DO 41 / 42 and 51 / 52 electrically isolated
(A)	Yes	No
(B)	Yes	No
(C)	No, only DO 41 / 42 can be used	No
(D)	No, only DO 51 / 52 can be used	No

Table 2: Connection versions digital output

## Digital communication

### HART® Communication

#### Note

The HART® protocol is an unsecured protocol, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

In connection with the DTM (Device Type Manager) available to the device, communication (configuration, parameterization) can be carried out FDT 0.98 or 1.2. Other tool or system integrations (e.g. Emerson AMS / Siemens PCS7) on request.

The necessary DTMs and other files can be downloaded from [www.abb.com/flow](http://www.abb.com/flow).

HART output	
Terminals	Active: Uco / 32 Passive: 31 / 32
Protocol	HART 7.1
Transmission	FSK modulation on current output 4 to 20 mA in accordance with the Bell 202 standard
Baud rate	1200 baud
Signal amplitude	Maximum 1.2 mAss

#### Factory setting of the HART process variables

HART process variable	Process value
Primary Value (PV)	Volume Flow in %
Secondary Value (SV)	Massflow in %
Tertiary Value (TV)	Volumeflow Totalizer Forward
Quaternary Value (QV)	Volumeflow Totalizer Reverse

The process values of the HART variables can be set in the device menu.

### Modbus® communication

#### Note

The Modbus® protocol is an unsecured protocol, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

Modbus is an open standard owned and administrated by an independent group of device manufacturers styled the Modbus Organization ([www.modbus.org/](http://www.modbus.org/)).

Using the Modbus protocol allows devices made by different manufacturers to exchange information via the same communication bus, without the need for any special interface devices to be used.

Modbus protocol	
Terminals	V1 / V2
Configuration	Via the Modbus interface or via the local operating interface in connection with a corresponding Device Type Manager (DTM)
Transmission	Modbus RTU - RS485 serial connection
Baud rate	2400, 4800, 9600, 19200, 38400, 56000, 57600, 115200 baud Factory setting: 9600 baud
Parity	None, even, odd Factory setting: odd
Stop bit	One, two Factory setting: One
IEEE format	Little endian, big endian Factory setting: Little endian
Typical response time	< 100 ms
Response delay time	0 to 200 milliseconds Factory setting: 10 milliseconds

Figure 52: Communication with the Modbus protocol

### Cable specification

The maximum permissible length is dependent on the baud rate, the cable (diameter, capacity and surge impedance), the number of loads in the device chain, and the network configuration (2-core or 4-core).

- At a baud rate of 9600 and with a conductor cross-section of at least 0.14 mm<sup>2</sup> (AWG 26), the maximum length is 1000 m (3280 ft).
- When using a 4-core cable as a 2-wire wiring system, the maximum length must be halved.
- The spur lines must be short, a maximum of 20 m (66 ft).
- When using a distributor with 'n' connections, each branch must have a maximum length of 40 m (131 ft) divided by 'n.'

The maximum cable length depends on the type of cable used. The following standard values apply:

- Up to 6 m (20 ft):  
cable with standard shielding or twisted-pair cable.
- Up to 300 m (984 ft):  
double twisted-pair cable with overall foil shielding and integrated earth cable.
- Up to 1200 m (3937 ft):  
double twisted-pair cable with individual foil shielding and integrated earth cables. Example: Belden 9729 or equivalent cable.

A category 5 cable can be used for Modbus RS485 up to a maximum length of 600 m (1968 ft). For the symmetrical pairs in RS485 systems, a surge impedance of more than 100 Ω is preferred, especially at a baud rate of 19200 and above.

## PROFIBUS DP® communication

### Note

The PROFIBUS DP® protocol is an unsecured protocol, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

### PROFIBUS DP interface

Terminals	V1 / V2
Configuration	Via the PROFIBUS DP interface or via the local operating interface in connection with a corresponding Device Type Manager (DTM)
Transmission	Based on IEC 61158-2
Baud rate	9.6 kbps, 19.2 kbps, 45.45 kbps, 93.75 kbps, 187.5 kbps, 500 kbps, 1.5 Mbps The baud rate is automatically detected and does not need to be configured manually
Device profile	PA Profile 3.02
Bus address	Address range 0 to 126 Factory setting: 126
Number of DP nodes	≤ 32, Node = Devices with / without PROFIBUS address
Bus termination	Bus termination required at the beginning and end of each DP segment!

For commissioning purposes, you will need a device driver in EDD (Electronic Device Description) or DTM (Device Type Manager) format plus a GSD file.

You can download EDD, DTM and GSD from [www.abb.com/flow](http://www.abb.com/flow).

The files required for operation can also be downloaded from [www.profibus.com](http://www.profibus.com).

ABB provides three different GSD files which can be integrated in the system.

ID number	GSD file name	
0x9740	PA139740.gsd	1xAI, 1xTOT
0x9700	PA139700.gsd	1AI
0x3432	ABB_3432.gsd	6xAI, 2xTOT, 1xAO, 1xDI, 1xDO

Users decide at system integration whether to install the full range of functions or only part. Switching is made using the 'Ident Nr. Selector' parameter.

See also Parameter description in the operating instruction.

## ... Digital communication

### ... PROFIBUS DP® communication

#### General Information

Figure 53: Bus cable length depends on the transmission rate

#### Pro PROFIBUS Line

(Line = Starts at DP Master and goes to last DP/PA Slave)

- Approximately 4 to 8 DP segments through the repeater (see repeater data sheets)
- Recommended DP transfer rate 500 to 1500 kBit/s
- The slowest DP node determines the transfer rate of the DP line
- Number of PROFIBUS DP and PA nodes  $\leq 126$  (addresses 0 to 125)

#### Per PROFIBUS DP segment

- Number of DP nodes  $\leq 32$  (Node = Devices with / without PROFIBUS address)
- Bus termination required at the beginning and end of each DP segment!
- Trunk cable length ( $L_T$ ) see diagram (length dependent on transfer rate)
- Cable length of at least 1 m between two DP nodes at  $\geq 1500$  kBit/s!
- Spur cable length ( $L_S$ ), at  $\leq 1500$  kBit/s:  $L_S \leq 0.25$  m, at  $> 1500$  kBit/s:  $L_S = 0.00$  m!
- At 1500 kBit/s and ABB DP cable type A:
  - Sum of all spur cable lengths ( $L_S$ )  $\leq 6.60$  m, trunk cable length ( $L_T$ )  $> 6.60$  m, total length =  $L_T + (\sum L_S) \leq 200$  m, maximum 22 DP nodes (= 6.60 m / (0.25 m + 0.05 m spare))

### PROFIBUS PA® Communication

#### Note

The PROFIBUS PA® protocol is an unsecured protocol, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

#### PROFIBUS PA interface

Terminals	V1 (PA+) / V2 (PA-)
Configuration	Via Device HMI or PROFIBUS PA-DTM or FDI package
Transmission	Based on IEC 61158-2
Device profile	The interface conforms to profile 3.02 (PROFIBUS standard, EN 50170, DIN 19245 [PRO 91])
PROFIBUS PA ID no	0x3438
Alternative standard ID no	0x9700 or 0x9740
Bus cable	Shielded, twisted cable (acc. to IEC 61158-2, types A or B are preferred)

#### Bus topology

- Tree and/or line structure
- Bus termination: passive at both ends of the main bus line (RC element  $R = 100 \Omega$ ,  $C = 1 \mu\text{F}$ )

#### Voltage / current consumption

- Average current consumption: 10 mA
- In the event of an error, the integrated FDE function (=Fault Disconnection Electronic) integrated in the device ensures that the current consumption can rise to a maximum of 13 mA.
- The upper current limit is restricted electronically.
- The voltage on the bus line must be within 9 to 32 V DC

#### Short circuit protection / reverse polarity protection

The Device Terminals V1 and V2, Profibus connects to, are short-circuit protected and have a reverse polarity protection.

#### System integration

ABB provides three different GSD files which can be integrated in the system.

ID number	GSD file name
0x9700	PA139700.gsd
0x9740	PA139740.gsd
0x3438	ABB_3438.gsd

Users decide at system integration whether to install the full range of functions or only part. Switching is made using the 'Ident Nr. Selector' parameter.

See also Parameter description in the operating instruction. You can download the GSD files from [www.abb.com/flow](http://www.abb.com/flow). For additional information, see separate interface documentation.

## EtherNet/IP™ and ProfiNet® communication

### Note

The EtherNet/IP™ and ProfiNet® protocols are unsecured protocols (in the sense of IT or cyber security), as such the intended application should be assessed before implementation to make sure that this protocol is suited.

Figure 54: Ethernet communication plug-in card

### Two port connection without power over Ethernet

#### Terminal designation:

Port	Pin	Function	Color coding
1	Pin 1	RD+	White / Orange
	Pin 2	RD-	Orange
	Pin 3	TD+	White / Green
	Pin 4	TD-	Green
2	Pin 1	RD+	White / Orange
	Pin 2	RD-	Orange
	Pin 3	TD+	White / Green
	Pin 4	TD-	Green

### One port connection without power over Ethernet

#### Terminal designation:

Port	Pin	Function	Color coding
1	Pin 1	RD+	White / Orange
	Pin 2	RD-	Orange
	Pin 3	TD+	White / Green
	Pin 4	TD-	Green

Standard Ethernet 10/100 BASE-T/TX (IEEE802.3) single port connection.

### One port connection with power over Ethernet

#### Terminal designation:

Port	Pin	Function	Color coding
1	Pin 1	RD+	White / Orange
	Pin 2	RD-	Orange
	Pin 3	TD+	White / Green
	Pin 4	TD-	Green
2	Pin 1	PWR+	White / Blue
	Pin 2	PWR+	Blue
	Pin 3	PWR-	White / Brown
	Pin 4	PWR-	Brown

Standard Ethernet 10/100 BASE-T/TX (IEEE802.3) single port connection.

## ... Digital communication

### ... EtherNet/IP™ and ProfiNet® communication

#### Ethernet communication

Equipped with an Ethernet Card, the flowmeter provides 2 Ports supporting a Ring, Star and Daisy Chain Network configuration.

In addition to the Ethernet Card, a plug-in Card providing ‚Power over Ethernet‘ is available. This Card allows to power the 24 V DC Version of the flowmeter through Ethernet without the need for additional power supply.

#### EtherNet/IP™ and ProfiNet® protocol

##### Note

The protocol is not secure, as such. The application should be assessed before Implementation to ensure the protocol is suitable.

The EtherNet/IP and ProfiNet protocol supports cyclic communication. Process Variables, Diagnostic Data and Device Status Information can be accessed cyclically. With ProfiNet communication, the DHCP (Dynamic Host Configuration Protocol) function is not supported and ProfiNet DCP (Discovery and Configuration Protocol) is used instead.

For Device Configuration a Webserver is available providing full access to all parameter and diagnostic data.

#### EtherNet/IP Interface

Configuration	Through the Webserver or the local operating Interface (Display).
EtherNet / IP ProductCode	5002
EDS file	FEW530_FEPFEH630_01_01.eds
Device profile	Profile 0x43, Generic Device, (keyable).
Supporte standards and protocols	Common Industrial Protocol (CIP™) Vol1, Ed 3.25 EtherNet/IP™ Adaptation of CIP™, Vol2, Ed 1.23
Cable	Cat 5

#### ProfiNet Interface

Configuration	Through the Webserver or the local operating Interface (Display).
Device profile	PA Profile 4.01 Specification
GSDML File	GSDML-V2.42-ABB_001A-3437_FLOW_EL_MAGNETIC-20220713.xml
GSD File	ABB 0x3437 or PNO 0xB332
Supporte standards and protocols	Common Industrial Protocol (CIP™) Vol1, Ed 3.25 EtherNet/IP™ Adaptation of CIP™, Vol2, Ed 1.23 PROFINET PNIO_Version V2.42

#### Further communication protocols

##### Note

The device supports following security modes:

Secured Protocols	Unsecured protocols
<b>Webserver https</b>	<b>EtherNet/IP, Modbus TCP and ProfiNet</b>
<ul style="list-style-type: none"> <li>Used ports by Webserver: TCP 443</li> <li>Security is based on .x509 Certificates</li> </ul>	<ul style="list-style-type: none"> <li>Used ports by EtherNet/IP: TCP 44818, UDP 2222</li> <li>Used ports by Modbus/TCP: TCP 502</li> <li>Used ports by ProfiNet: UDP 34964, 49152</li> </ul>

All protocols can be enabled / disabled in the HMI Menu.

# Operation in Zone 1, 21

## Electrical connections

Figure 55: Electrical connections

### Note

For detailed information about grounding the transmitter and the flowmeter sensor, please refer to chapter 'Grounding' in the Commissioning instruction or the operating instruction.

### Connections for the power supply

#### AC power supply

Terminal	Function / comments
L	Phase
N	Neutral conductor
PE / ⊕	Protective earth (PE)
▽ / PA	Potential equalization

#### DC voltage supply

Terminal	Function / comments
1+	+
2-	-
PE / ⊕	Protective earth (PE)
▽ / PA	Potential equalization

### Connections for inputs and outputs

Terminal	Function / comments
Uco / 32	Current output 4 to 20 mA- / HART output, active or
31 / 32	Current output 4 to 20 mA- / HART output, passive
41 / 42	Passive digital output DO1
51 / 52	Passive digital output DO2
V1 / V2	Plug-in card, slot OC1
V3 / V4	Plug-in card, slot OC2

Plug-in cards may not be retrofitted in devices with explosion protection on-site – loss of Ex Approval.

G12472

## ... Operation in Zone 1, 21

### ... Electrical connections

#### Optional plug-in cards

See **Optional plug-in cards** on page 48.

#### Configuring the current output

Current output terminals 31 / 32 / Uco can be operated on-site in active or passive mode through appropriate switching.

Terminal Uco / 32	Current output 4 to 20 mA- / HART output, active
Terminal 31 / 32	Current output 4 to 20 mA- / HART output, passive

#### Configuring the digital outputs

In the case of the device version suited for operation in Ex Zone 1 (dual-compartment housing), digital outputs DO1 (41 / 42) and DO2 (51 / 52) can be configured for connection to a NAMUR switching amplifier.

On leaving the factory, the device is configured with the standard wiring (non-NAMUR).

#### Note

The outputs' type of protection remains unaffected by this.  
The devices connected to these outputs must conform to the applicable regulations for explosion protection.

#### Special connection conditions

The output circuits are designed so that they can be connected to both intrinsically-safe and non-intrinsically-safe circuits.

- Combining intrinsically safe and non-intrinsically safe circuits is not permitted.
- On intrinsically safe circuits, potential equalization should be established along the entire length of the cable used for the signal outputs.
- The rated voltage of the non-intrinsically safe circuits is  $U_M = 30 \text{ V}$ .
- Intrinsic safety is preserved if the rated voltage  $U_M = 30 \text{ V}$  is not up-scaled when connections are established to non-intrinsically safe external circuits.

## Electric data for operation in Zone 1, 21

### Devices with HART protocol

When operating in potentially explosive areas, observe the following electrical data for the signal inputs and outputs of the transmitter.

Current output terminals 31 / 32 / Uco can be operated on-site in active or passive mode through appropriate switching.

Model: FEP631, FEH631 or FET632	Type of protection		'ia' / 'IS'											
	'e' / 'XP'													
Outputs on basic device	$U_M$	$I_M$	$U_O$	$U_I$	$I_O$	$I_I$	$P_O$	$P_I$	$C_O$	$C_I$	$C_{OPA}$	$C_{IPA}$	$L_O$	$L_I$
	[V]	[A]												
<b>Current / HART output 31 / U<sub>CO</sub>, active</b> Terminals 31 / U <sub>CO</sub>	30	0.2	30	30	115	115	815	815	10	10	5	5	0.08	0.08
<b>Current / HART output 31 / 32, passive</b> Terminals 31 / 32	30	0.2	—	30	—	115	—	815	—	27	—	5	0.08	0.08
<b>Digital output 41 / 42, active*</b> Terminals 41 / 42 and V1 / V2*	30	0.1	27.8	30	119	30	826	225	20	20	29	29	0.22	0.22
<b>Digital output 41 / 42, passive</b> Terminals 41 / 42	30	0.1	—	30	—	30	—	225	—	27	—	5	—	0.08
<b>Digital output 51 / 52, active*</b> Terminals 51 / 52 and V1 / V2*	30	0.1	27.8	30	119	30	826	225	20	20	29	29	0.22	0.22
<b>Digital output 51 / 52, passive</b> Terminals 51 / 52	30	0.1	—	30	—	30	—	225	—	27	—	5	—	0.08

All outputs are electrically isolated from each other and from the power supply.

Digital outputs 41 / 42 and 51 / 52 are not electrically isolated from each other. Terminals 42 / 52 have the same potential.

	HT		130°C	130°C	130°C
	NT	T5	95°C	95°C	95°C
	HT		95°C	95°C	95°C
	NT	T6	80°C	80°C	80°C
	HT		80°C	80°C	80°C

\* Low-temperature version (option)

NT standard version,  $T_{\text{medium}}$  maximum 130 °C (266 °F)

HT high-temperature version,  $T_{\text{medium}}$  maximum 180 °C (356 °F)

Thermally uninsulated: the sensor is not enclosed with pipe insulation material.

Thermally insulated: the sensor is enclosed with pipe insulation material.

#### Note

Cables for power supply, signal inputs and outputs must meet the following specifications:

- At an ambient temperature  $\leq 50$  °C the cable must be suited for at least 60 °C
- At an ambient temperature  $\leq 60$  °C the cable must be suited for at least 70 °C

**Measuring medium temperature (Ex Data) for ProcessMaster Model FEP632**

Nominal diameter	Design	Temperature class	Ambient temperature (-40 °C)* -20 °C to +40 °C	Ambient temperature (-40 °C)* -20 °C to +50 °C	Ambient temperature (-40 °C)* -20 °C to +60 °C
			thermally uninsulated, thermally insulated	thermally uninsulated, thermally insulated	thermally uninsulated, thermally insulated

\* Low-temperature version (option)

NT standard version, T<sub>medium</sub> maximum 130 °C (266 °F)

HT high-temperature version, T<sub>medium</sub> maximum 180 °C (356 °F)

Thermally uninsulated: the sensor is not enclosed with pipe insulation material.

Thermally insulated: the sensor is enclosed with pipe insulation material.

**Note**

Cables for power supply, signal inputs and outputs must meet the following specifications:

- At an ambient temperature ≤ 50 °C the cable must be suited for at least 70 °C
- At an ambient temperature ≤ 60 °C the cable must be suited for at least 80 °C

# Operation in Zone 2, 22

## Electrical connections

Sensor FEP631, FEH631, FEP632, FEH632 and transmitter FET632 (Zone 2)

FET632 transmitter outside the hazardous area

Figure 56: Electrical connections

### Note

For detailed information about grounding the transmitter and the flowmeter sensor, please refer to chapter 'Grounding' in the Commissioning instruction or the operating instruction.

### Connections for the power supply

AC power supply	
Terminal	Function / comments
L	Phase
N	Neutral conductor
PE / ⊕	Protective earth (PE)
▽ / PA	Potential equalization

DC voltage supply	
Terminal	Function / comments
1+	+
2-	-
PE / ⊕	Protective earth (PE)
▽ / PA	Potential equalization

### Connections for inputs and outputs

Terminal	Function / comments
Uco / 32	Current output 4 to 20 mA- / HART output, active or
31 / 32	Current output 4 to 20 mA- / HART output, passive
41 / 42	Passive digital output DO1
51 / 52	Passive digital output DO2
V1 / V2	Plug-in card, slot OC1
V3 / V4	Plug-in card, slot OC2

Plug-in cards may not be retrofitted in devices with explosion protection on-site – loss of Ex Approval.

### Connecting the signal cable

Only for remote mount design. The sensor housing and transmitter housing must be connected to potential equalization.

Terminal	Function / comments
U <sub>FE</sub>	Sensor power supply
GND	Ground
A	Data line
B	Data line
⊕	Functional earth / Shielding

**Special connection conditions****Note**

The AS plug-in card (24 V DC loop power supply) may only be used to power the internal inputs and outputs on the device. It must not be used to power external circuits!

**Note**

If the protective earth (PE) is connected in the flowmeter's terminal box, you must ensure that no dangerous potential difference can arise between the protective earth (PE) and the potential equalization (PA) in areas with explosion risk.

**Note**

For devices with a power supply of 16 to 30 V DC, on-site external overvoltage protection must be provided. It must be ensured that the overvoltage is limited to 140 % (= 42 V DC) of the maximum operating voltage.

## ... Operation in Zone 2, 22

### Electrical data for operation in Zone 2, 22

#### Devices with HART protocol

When operating in potentially explosive areas, observe the following electrical data for the signal inputs and outputs of the transmitter.

Current output terminals 31 / 32 / Uco can be operated on-site in active or passive mode through appropriate switching.

**Model: FEP631, FEH631 or FET632**

Outputs on basic device	Operating values (general)		Type of protection – 'nA' / 'NI' / 'ec'	
	$U_N$	$I_N$	$U_N$	$I_N$
<b>Current / HART output 31 / UCO, active</b> Terminals 31 / UCO	30 V	30 mA	30 V	30 mA
<b>Current / HART output 31 / 32, passive</b> Terminals 31 / 32	30 V	30 mA	30 V	30 mA
<b>Digital output 41 / 42, passive</b> Terminals 41 / 42	30 V	25 mA	30 V	25 mA
<b>Digital output 51 / 52, passive</b> Terminals 51 / 52	30 V	30 mA	30 V	30 mA
<b>Digital output 41 / 42, active*</b> Terminals 41 / 42 and V1 / V2*	30 V	30 mA	30 V	30 mA
<b>Digital output 51 / 52, active*</b> Terminals 51 / 52 and V1 / V2*	30 V	30 mA	30 V	30 mA

\* Only in conjunction with additional '24 V DC loop power supply (blue)' plug-in card in slot OC1.

All outputs are electrically isolated from each other and from the power supply.

Digital outputs 41 / 42 and 51 / 52 are not electrically isolated from each other. Terminals 42 / 52 have the same potential.

**Model: FEP631, FEH631 or FET632**

Plug-in cards	Operating values (general)		Type of protection – 'nA' / 'NI' / 'ec'	
	$U_N$	$I_N$	$U_N$	$I_N$
<b>Current output, active*</b> Terminals V3 / V4 and V1 / V2**	30 V	30 mA	30 V	30 mA
<b>Current output, passive</b> Terminals V1 / V2 or V3 / V4**	30 V	30 mA	30 V	30 mA
<b>Digital output, active*</b> Terminals V3 / V4 and V1 / V2**	30 V	25 mA	30 V	25 mA
<b>Digital output, passive</b> Terminals V1 / V2 or V3 / V4**	30 V	30 mA	30 V	30 mA
<b>Digital input, active*</b> Terminals V3 / V4 and V1 / V2**	30 V	3.45 mA	30 V	3.45 mA
<b>Digital input, passive</b> Terminals V1 / V2 or V3 / V4**	30 V	3.45 mA	30 V	3.45 mA
<b>Modbus Card (RTU)</b> Terminals V1/V2	30 V	30 mA	30 V	30 mA
<b>Profibus DP card</b> Terminals V1/V2	30 V	30 mA	30 V	30 mA
<b>Profibus PA card</b> Terminals V1/V2	32 V	30 mA	32 V	30 mA
<b>Ethernet card</b> Port 1: Pin X1 to X4 Port 2: Pin X5 to X8	57 V	417 mA	57 V	417 mA
<b>Ethernet Card in conjunction with Power over Ethernet (POE Card)</b> Port 1: Pin X1 to X4 Port 2: Pin X5 to X8	57 V	417 mA	57 V	417 mA

\* Only in conjunction with additional '24 V DC loop power supply (blue)' plug-in card in slot OC1.

\*\* The terminal assignment relates to the Option Card Slot. Slot 1 = Terminals V1/V2. Slot 2 = Terminal V3/V4. For more details, refer to Installation in the operating instruction.

## Temperature data

	NT	T4	130°C		130°C		130°C		
	HT		130°C		130°C		130°C		
	<b>Note:</b> The data below does not apply to Flowmeters equipped with the plug-in card for Ethernet communication (model code DR6)!								
		NT	T5	95°C		95°C		40°C**	
		HT		95°C		95°C		—***	
		NT	T6	80°C		—		—	
		HT		80°C		—		—	

\* Low-temperature version (option)

\*\* Single-compartment housing

\*\*\* Dual-compartment housing

NT standard version,  $T_{\text{medium}}$  maximum 130 °C (266 °F)

HT high-temperature version,  $T_{\text{medium}}$  maximum 180 °C (356 °F)

Thermally uninsulated: the sensor is not enclosed with pipe insulation material.

Thermally insulated: the sensor is enclosed with pipe insulation material.

#### Note

Cables for power supply, signal inputs and outputs must meet the following specifications:

With single-compartment housing

- At an ambient temperature of 50 °C the cable must be suited for at least 80 °C
- At an ambient temperature of 60 °C the cable must be suited for at least 90 °C

With dual-compartment housing

- At an ambient temperature of 50 °C the cable must be suited for at least 70 °C
- At an ambient temperature of 60 °C the cable must be suited for at least 80 °C

## ... Operation in Zone 2, 22

	HT		80°C	80°C	20°C

\* Low-temperature version (option)

NT standard version,  $T_{\text{medium}}$  maximum 130 °C (266 °F)

HT high-temperature version,  $T_{\text{medium}}$  maximum 180 °C (356 °F)

Thermally uninsulated: the sensor is not enclosed with pipe insulation material.

Thermally insulated: the sensor is enclosed with pipe insulation material.

#### Note

Cables for power supply, signal inputs and outputs must meet the following specifications:

- At an ambient temperature  $\leq 50$  °C the cable must be suited for at least 70 °C
- At an ambient temperature  $\leq 60$  °C the cable must be suited for at least 80 °C

#### Use in areas exposed to combustible dust

When using the device in areas exposed to combustible dusts (dust ignition), the following points must be observed:

- The maximum surface temperature of the device may not up-scale the following values.
 

FEP631, FEH631	80 °C (176 °F)
FEP632, FEH632	80 °C (176 °F)
FET632	80 °C (176 °F)
- The process temperature of the attached piping may up-scale 80 °C (176 °F).
- Approved dust-proof cable glands must be used when operating in Zone 21, 22 or in Class II, Class III.
- In potentially explosive atmospheres, the signal cable must measure at least 5 m (16.40 ft).

### Notes for ProcessMaster FEP631

- 1) Not available with Single Compartment Housing
- 2) For China production site only.
- 3) Not available with Div1 in conjunction with -40°C
- 4) Not available with Zone 1 / Div 1
- 5) Flange DN 15 ... 600 based on ASME B16.5. Flange > DN 600 based on ASME 16.47 Serie B.
- 6) DN 25 ... DN 200 (1 ... 8 in.) Hard Rubber
- 6a) Available from DN25 ... 400 with Hardrubber or ETFE
- 6b) Upon Request
- 7) Available from DN 1000 (40 in.)
- 8) Available from DN25-1000. With Tungsten-Carbide electrode only
- 9) Available from DN25-1000

**Notes for ProcessMaster FEP631**

- 10) Available from DN3-200
- 11) Available from DN25
- 12) Available from DN50
- 13) Available from DN10-600
- 14) Available from DN25-300
- 15) Material: Refer to data sheet. Available with Design Level A
- 16) Available from DN10-400
- 17) TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 18) Grounding electrodes, material same as measuring electrodes material
- 19) Grounding electrodes, material same as measuring electrodes material TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 20) Available with sensor size <= DN 600 (24 in.) and PTFE / Thick-PTFE / ETFE / PFA liner material. For material, refer to data sheet
- 21) Current output (active or passive) can be configured on site
- 22) Will be specified by ABB
- 23) Available with 5points Calibration
- 24) Not available with size DN 3-8 and > DN900. 0,2% calibration assumes 3 calibration points. If more than 3 calibration points are required, specify 5 points under 'Number of test points'.
- 25) 2 points calibration is Standard. If more than 2 test points are required, please specify 3 or 5 points with option 'Number of Test points'. Accuracy = 0.4 % of rate with size > DN 3
- 26) 3 or 5 test points to be specified
- 27) Maximum fluid temperature with standard sensor design:
  - 130 °C (266 °F) with PTFE, PFA, ETFE
  - 80 °C (194 °F / 176 °F) with hard rubber
  - 60 °C (140 °F) with soft rubber
- 28) Max. fluid temperature with high temperature sensor design:
  - 180 °C (356 °F) with PFA, Thick PTFE.
  - 130 °C (266 °F) with ETFE, PTFE liners.
- Thick PTFE available for sensor size DN 25 ... DN 300. PFA available for sensor size DN 10 ... DN 200
- 29) Not available with calibration acc to ISO17025
- 30) Available from DN700 and up from China production site
- 31) Not available with Ex
- 32) Available up to DN300 (12")
- 33) Available with Housing Type Code "D1" or "D2"
- 34) To be configured in conjunction with Option Card 1 = Mod bus RTU
- 35) To be configured in conjunction with Option Card 1 = Profibus DP
- 36) To be configured in conjunction with Option Card 1 = Ethernet IP or Modbus TCP
- 37) Available with single compartment housing only, Non Ex or Zone 2, Div. 2 only
- 38) Available with single compartment housing only and with 24 V power supply unit
- 39) Available with single compartment housing, Ethernet Card, Non-Ex or ATEX Zone 2
- 40) Profinet in preparation
- 41) Available from 30" onwards

### ... ProcessMaster FEP632

#### Notes for ProcessMaster FEP632

- 24) Not available with size DN 3-8 and > DN800. 0,2% calibration assumes 3 calibration points. If more than 3 calibration points are required, specify 5 points under 'Number of test points'.
- 25) 2 points calibration is Standard. If more than 2 testpoints are required, please specify 3 or 5 points with option 'Number of Testpoints'. Accuracy = 0.4 % of rate with size > DN 3
- 26) 3 or 5 testpoints to be specified
- 27) Max. fluid temperature with standard sensor design:  
130 °C (266 °F) with PTFE, PFA, ETFE  
80 °C (194 °F / 176 °F) with hard rubber  
60 °C (140 °F) with soft rubber
- 28) Max. fluid temperature with high temperature sensor design:  
180 °C (356 °F) with PFA, Thick PTFE. Thick PTFE available for sensor size DN 25 ... DN 300. PFA available for sensor size DN 10 ... DN 200  
130 °C (266 °F) with ETFE, PTFE liners.
- 29) Not available with calibration acc to ISO17025
- 30) Available from DN700 and up from China production site
- 31) Not available with Ex
- 32) Available up to DN300 (12")
- 33) Not available with EX Zone 1, Div 1
- 34) Available from 30" onwards

### ... Remote transmitter FET632

Remote transmitter FET632	7,8	...	20,21,22	23,24	25,26,27	28,29,30	31,32,33	34,35	36,37	38,39	40,41,42	43,44	45,46,47	...	51,52
<b>Option Card 2</b>															
Without			DSO												
1 x Analog Output passive (4...20mA)			DSA												
1 x Digital Input			DSN												
1 x Digital Output			DSG												
Module Power over Ethernet/ Modbus TCP (for Single Comp Hsg)			DS8 <sup>1)</sup>												
<b>SIL Certificate</b>															
SIL Certificate				CS											
<b>Shipping Register Certificate</b>															
Marine approval (DNV)					CL5										
<b>Potable Water and Food &amp; Beverage Approvals</b>															
Without						CWY									
<b>Other Explosion Protection Certifications and other Approvals</b>															
Russia metro+EAC							ED1								
Russia metro+EAC+EX							ED2								
<b>Other Options</b>															
Without								KO							
With Gore-tex membrane								KG							
<b>Documentation Language</b>															
German									M1						
English									M5						
Language package Western Europe / Scandinavia									MW						
Language package Eastern Europe									ME						
<b>Device Identification Plate</b>															
Adhesive label										TC					
Stainless steel										T1					
Stainless steel and TAG plate (stainless steel)										TS					
Others										TZ					
<b>Temperature Range of Installation / Ambient Temperature Range</b>															
Standard design / -20 ... 60 °C (-4 ... 140 °F)											TK1				
Standard design / -40 ... 60 °C (-40 ... 140 °F)											TK4				
<b>Remote Transmitter Mounting Kit</b>															
Without													B0		
2" Pipe Mounting Kit for Wall-mount / Dual compartment Housing													B1		
2" Pipe Mounting Kit for Field-mount / Single compartment Housing													B2		
<b>Transmitter Software Function Package</b>															
Standard															NFS

1 × RJ45 connector with 10 m (30 ft) cable length fitted (4 signal leads)						U6 <sup>12)</sup>
2 × RJ45 connector with 10 m (30 ft) cable length fitted (4 signal leads)						UD <sup>12)</sup>
1 × RJ45 connector with 10 m 30 ft cable length fitted (8 signal leads)						UH <sup>12)</sup>
1 × RJ45 connector with 15 m (49 ft) cable length fitted (4 signal leads)						U7 <sup>12)</sup>
2 × RJ45 connector with 15 m (49 ft) cable length fitted (4 signal leads)						UJ <sup>12)</sup>
1 × RJ45 connector with 15 m 49 ft cable length fitted (8 signal leads)						UK <sup>12)</sup>
1 × RJ45 connector with 20 m (66 ft) cable length fitted (4 signal leads)						U8 <sup>12)</sup>
2 × RJ45 connector with 20 m (66 ft) cable length fitted (4 signal leads)						UN <sup>12)</sup>
1 × RJ45 connector with 20 m (66 ft) cable length fitted (8 signal leads)						UP <sup>12)</sup>
Fieldbus M12x1 (for Profibus PA)						UR

### Notes for Remote transmitter FET632

- 1) Not available with Single Compartment Housing
- 2) Not available with -40°C. Not available with Single Compartment Housing
- 3) Not available with Zone 1 / Div. 1
- 3a) Not available with Zone 2 / Div. 2
- 4) Current output (active or passive) can be configured on site
- 5) Not available with Ex
- 6) Available with housing Type Code 'W1' or 'W2'
- 7) To be configured in conjunction with Option Card 1 = Modbus RTU
- 8) To be configured in conjunction with Option Card 1 = Profibus DP
- 9) To be configured in conjunction with Option Card 1 = Ethernet IP or Modbus TCP
- 10) Available with single compartment housing only, Non Ex or Zone 2, Div. 2 only
- 11) Available with single compartment housing only and with 24 V power supply unit
- 12) Available with single compartment housing, Ethernet Card, Non-Ex or ATEX Zone 2
- 13) Profinet in preparation
