Power supply

Two-wire technology, polarity safe; power supply lines = signal lines

Note
Following calculations apply for standard applications. This should be taken into consideration when working with a higher maximum current.

Power supply – HART®

Supply voltage

- Non-Ex application:
  U_S = 11 to 42 V DC
- Ex applications:
  U_S = 11 to 30 V DC

Maximum permissible residual ripple for Supply voltage
During communication this complies with the HART FSK 'Physical Layer' specification.

Undervoltage detection on the transmitter
If the terminal voltage on the transmitter down-scales a value of 10 V, this may lead to an output current of $I_a \leq 3.6$ mA.

Maximum load

R_B = (supply voltage – 11 V) / 0.022 A

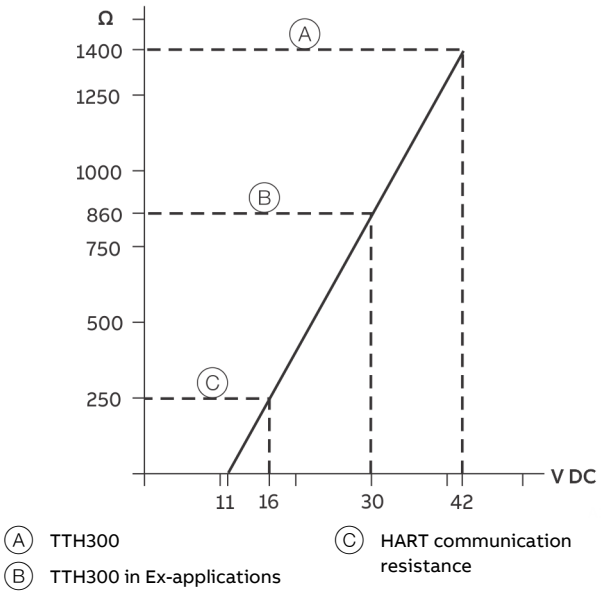

Figure 2: Maximum load depending on Supply voltage

Maximum power

$P = U_s \times 0.022$ A

E. G.: $U_s = 24$ V → $P_{max} = 0.528$ W

Power supply – PROFIBUS® / FOUNDATION Fieldbus®

Supply voltage

- Non-Ex application:
  U_S = 9 to 32 V DC
- Ex-applications:
  U_S = 9 to 17,5 V DC (FISCO)
  U_S = 9 to 24 V DC (Fieldbus Entity model I.S.)

Current consumption

≤ 12 mA
