

ABB MEASUREMENT & ANALYTICS | DATA SHEET

# **LM200 Laser level transmitter**

Measurement made easy Long range level products

## Level measurement made easy

- Maintenance free, non-contact continuous level transmitter
- · No calibration required
- Continuous level monitoring for granular solid materials and opaque liquids
- · Measures solids and opaque liquids at any angle
- Built-in laser pointer for accurate alignment in narrow or tall vessels
- · Auto-ranging to measure all levels
- Available non-condensing heated optics prevent condensation issues

## A convenient solution

- Rugged and robust powder coated aluminum enclosure for use in harsh environments
- CSA, ATEX and IECEx potentially explosive atmosphere ratings
- Easy to install and configure without filling or emptying the vessel
- · 4-20 mA and dual relay outputs

## **High performance**

- Less than 0.2° beam divergence for precision targeting
- No false echoes
- Range up to 190 m (620 ft.) for level applications
- And up to 400 m (1312 ft.) for positioning applications
- · Three updates per second
- · Can penetrate moderate dust

## Many different materials

- Measures all clearly visible surfaces irrespective of texture, granularity, slope and / or color
- Measures any opaque liquid level independent of dielectric constant or other physical properties
- Accurately measures to the surface of mineral ores, grains, and synthetic materials
- Examples include: gold and metal ores, coal, corn, rice, coffee, plastic pellets, oils and fuels

## Many different vessels and conditions

- Works in all types of storage vessels including silos, tanks, feed chutes, bunkers and hoppers
- Can measure through narrow gaps
- Reads to the bottom of silos and tanks

## **Options and accessories**

- · Stainless steel dust tubes
- Stainless steel 4 and 6 inch universal mounting plates sized for ANSI 150 and DIN PN10 flanges
- · Stainless steel raised face ANSI and DIN Flanges
- Handheld configuration device (LCD2)

## **Overview**

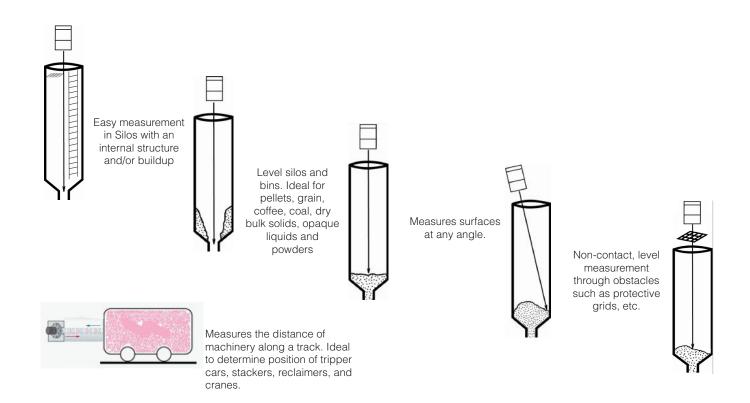

The laser level transmitter (LM200) is a non-contact, level and distance measuring instrument designed for granular solid materials and opaque liquids. Based on pulsed laser technology, the LM200 embodies speed and accuracy in a single, easy to use and install product. The characteristic narrow beam divergence of the laser permits direct aiming to the target surface without interference from structure or falling material. With both continuous 4–20 mA and single point relay outputs, the LM200 can operate as a process control transmitter while simultaneously providing high and low alarms. Whether measuring a few meters into the confined space of a crusher, or to the bottom of the tallest silo, the LM200 with its laser pointer and long range is the plug-and-play solution to level measurement.

# Level and distance measurement with laser technology

The LM200 uses a high speed laser pulse to measure distance. The laser light is emitted towards the surface and some of it reflects back to the instrument where it is detected by a sensitive optical receiver. The time it takes for the light to travel to the surface and back to the instrument is directly proportional to the distance between the instrument and the surface. Using a time-of-flight calculation, and knowing the height of the vessel, the LM200 accurately measures the distance to the target surface using the equations below:

Distance = speed of light x time-of-flight
2
Level = Height - Distance

The unique characteristics of laser light give the LM200 significant performance advantages over other technologies. The narrow, long range beam can measure both near and far distances while the optical wavelength makes it easy to evaluate applications. If you can see the surface clearly, the LM200 can measure the distance.

## Range guide

The LM200 is mounted on top of a storage vessel aiming downwards towards the surface. Using the visible laser pointer, the position and angle of the LM200 can be adjusted so that the instrument measures all the way to the bottom of the vessel. Settings such as: the distances for the 4–20 mA output; and the relay switching points, can be entered into the instrument either before installation, or in situ using the laser configuration (LCD2) accessory. Another recommended accessory is the stainless steel dust tube (P201) which keeps the optical system of the LM200 clean for long periods.

#### Range explained

The LM200 is able to measure the level in tall silos because of the inherent long distance capability of laser technology. The laser has a natural advantage because it gets strong, clear signals from most types of granular solid materials. As the laser beam does not spread out and lose strength as it travels, there is little signal loss with increased distance.

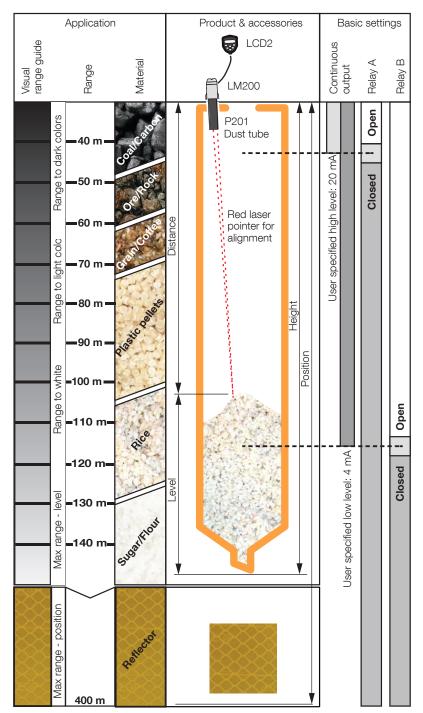

#### **Auto-ranging**

Auto-ranging is a hardware feature which increases the range of the internal timing circuitry of the LM200. It does this in response to the 4–20mA or relay set points that are entered by the user. If these settings are less than 35 m (114.8 ft) then automatic "Range 1" is used. Between 35 m (114.8 ft) and 85 m (278.9 ft), automatic "Range 2" is selected. As the LM200 switches between these ranges there is no loss of accuracy, only a slight reduction in measuring speed.

## Ultimate range

The ultimate limit of range for the LM200 depends on the reflectivity of the material being measured, not on the height of the vessel. Dark colored materials can be measured over a shorter range than light colored materials. Using the chart on the left, a visual comparison between the graded "Visual range guide" strip and the surface to be measured tells you what range is practically possible.

When the LM200 is used for positioning applications with a reflective target it can measure to a maximum distance of 400 m (1300 ft).

## **Specifications**

#### **Measurements**

#### Range

0.5 m (1.5 ft) to 40 m (131 ft) - dark colored surfaces 0.5 m (1.5 ft) to 190 m (623 ft) - light colored surfaces 0.5 m (1.5 ft) to 400 m (1300 ft) - reflective targets in positioning applications

#### Resolution

±10 mm (0.4 in)

#### Accuracy

±30 mm (1.2 in)

#### Update rate

3 readings per second (maximum), 1 reading per minute (minimum)

#### Operating temperature

-40°C to +60°C (-40°F to +140°F)

Note: While the initial (cold start) accuracy of the LM200 will be within specifications, a settling period of approximately 15 minutes is recommended to allow the electronics to warm up and the internal temperature to stabilize.

## Survival temperature

-40°C to +80°C (-40°F to +176°F)

#### Pressure

Atmospheric

### **Outputs**

## Analog

4–20 mA, NAMUR compliant non-isolated and self powered

## Digital (Relay)

2 SPST relays: 1 A at 120 VAC, 0.5 A at 250 VAC, 1 A at 60 VDC

### Communication

Standard male DB9 connector - RS232 for testing, troubleshooting and configuration 19200 baud, 8 data bits, 1 stop bit, no parity, no flow control

## **Power supply**

#### Voltage

24 V DC typical (18 to 32 V DC)

#### Current

0.4 A peak ( less than 100 ms), 0.2 A continuous 0.55 A peak, 0.35 A continuous with non-condensing optics

## Mechanical

## Base plate diameter

127 mm (5 in)

#### Length

303 mm (12 in)

#### Weight

Aluminum enclosure - 3.86 kg (8.5 lbs)

#### **Enclosure material**

Powder coated aluminum standard

### O-ring seal material

Buna-N (Nitrile Rubber)

#### Mounting / process connection

Flange - 4 holes to allow bolting on a flange or bracket with 4 M6 screws.

## Optical

### **Total optical aperture**

100 mm (4 in)

### Measuring laser lens diameter

50 mm (1.97 in)

### Receiver lens diameter

50 mm (1.97 in)

#### Lens material

Glass

## Lens impact resistance

Impact tested at 4 joules

## Beam divergence

∆ < 0.2°

### Beam spot diameter

$$2R \tan \left(\frac{\Delta}{2}\right)$$

Where R is the range to the target and  $\Delta$  is the beam divergence

### Beam direction

90° ± 1° from mounting flange

## **Specifications**

#### Laser

#### Measuring laser

905 nm near infrared pulsed semiconductor laser

12 mW average power output

20 W peak power output

#### Pointing laser

635 nm red semiconductor laser

3 mW continuous

### Measuring laser life expectancy

25 years typical MTBF

## Measuring laser safety

Always on IEC60825-1 class 1M laser

A class 1M laser is safe for all conditions of use except when passed through magnifying optics. This means the maximum permissible exposure cannot be exceeded when viewing the laser with the naked eye without the aid of magnifying optics.

### Pointing laser safety

Intermittent IEC80825-1 class 3R laser

Laser comes on at power up for 2 minutes, it can be turned back on for commissioning using the LCD2 communications and configuration device.

A class 3R laser is considered safe if handled carefully, with restricted beam viewing. With a class 3R laser the maximum permissible exposure can be exceeded when viewing the laser with the naked eye, but with a low risk of injury.

## Purge for use with the dust tubes

#### Purge air flow

Must be oil free dry air recommended flow between 0.5 and 4 L/minute maximum pressure 5.5 bar (80 psi)

## **Purge fitting**

1/8 NPT (to be connected on the dust tubes)

## **Environmental**

## **Enclosure rating**

IP66/Nema 4X (Dust proof, can be washed down with high pressure hose)

## Gas rating

This equipment can be used in flammable gases or vapor hazardous locations.

Documentation for LM200 laser level transmitter is available for download from www.abb.com/level

# **Specifications**

#### **Approvals**

The instrument is certified with the following environmental safety ratings which must not be exceeded. Copies of instrument certifications are available

Material	304 Stainless steel				
Pressure rating	No pressure rating, atmospheric pressure only				

## Adjustable pivot bracket (A200)

Outer diameter / width

160 mm (6.3 in)

Opening diameter

90 mm (3.54 in)

Mounting plate thickness

4.76 mm (0.19 in)

Mounting bolt

HHCS screw 5/16-18, bolt hole 8.33 mm (0.33 in)

Height of pivot

25.4 mm (1 in)

Tilt angle for aiming

Continuously adjustable over 180°

Material

304 Stainless steel

## **Accessories** — specifications

# Communication/configuration device and local display (LCD2)

#### **Protocol**

RS232 ASCII menus

#### Connector

Standard female DB9

#### Interface

Monochrome LCD display / 6 button keypad

#### Size

Width 55 mm (2.17 in), Height 97 mm (3.82 in), Thickness 32.5 mm (1.28 in)

#### Material

Plastic enclosure

### Cable length

150 cm (59 in)

#### Warning

Not rated for dust or gas / cannot be used in hazardous area

## RS232 to USB cable (USBR)

#### **Function**

Connect to standard PC for configuration

#### Description

Made up of two cables that work together:

Standard DB9 female to female null modem RS232 cable

Standard male DB9 to full size type B female USB

## Cable length

Null modem DB9 cable 305 cm (120 in)

DB9 to USB cable 45 cm (17.7 in)

#### Recommended software

Windows: PuTTY free open source terminal emulator

Mac OS X: Terminal built in terminal emulator

#### Warning

Not rated for dust or gas / cannot be used in hazardous area

## Reflector (REFL)

## Function

Reflective panel for positioning applications up to 150 m

## Size

90 cm x 90 cm (36 in x 36 in)

#### Material

Aluminum with reflective paint

## Cable glands (GCK)

## Description

Set of 2 Ex cable glands with 1/2 in. NPT thread, size 0/8 mm and size 00/12 mm

## **Metric adaptor (GC1)**

#### Description

Exd/e Flameproof imperial to metric adapter,  $\frac{1}{2}$  inch NPT to M20

#### **Function**

Enables use of metric M20 threaded conduits or cable glands with LM200  $\,$ 

#### **Demo Kit**

#### Description

Rugged carrying case with LM200, dust tube and LCD2

## Software menu system

### Software menu system

Communication with the LM200 takes place via the RS232 port located in the terminal compartment. Connect a computer with a standard USB port using the USBR cable and a terminal emulation programme such as PuTTY, or the handheld Communication Device (LCD2) directly to this port. Power up the LM200 and press the "EXIT" or "ENTER" button on the LCD2, or the PC's "Spacebar" to enter the menu system.

The LM200 has advanced settings for more demanding applications. If the surface is unstable then the output can be smoothed by the rolling average "Buffer". If material occasionally falls into the beam the erroneous result can be removed and the correct level maintained by using the "Keep" setting. If the LM200 is being used in a dusty environment the incorrect readings can be eliminated using the "Dust" settings.

There are controls for the visible pointer, for the maximum range, for offsets, test facilities for the 4–20 mA and relay outputs, a choice of Metric or Imperial measuring units and settings for fail-safe conditions based on the NAMUR standards.

## Software menu item descriptions

Menu item	Values / Options	LCD2	Description		
Running mode	Distance measured and 4–20 mA curre	nt output d	isplayed.		
4–20 mA Settings	A group of settings and options related to the 4–20 mA analog output.				
4 mA setpoint	0.00 m (ft) to max range	Yes	Sets the distance at which the analog output reads 4 mA		
20 mA setpoint	0.00 m (ft) to max range	Yes	Sets the distance at which the analog output reads 20 mA		
Fail-safe output	3.6 mA, 21.00 mA, last mA reading	Yes	Select the fail-safe 4–20 mA analog value to be output if there is no signal		
Safety time (Fail-safe delay)	0 sec to 450 sec	Yes	Enter the time that the signal is lost before the fail-safe condition is output		
4–20 mA test	4.00 mA, 12.00 mA, 20.00 mA	Yes	Select a value to output on the analog channel for test purposes		
4–20 mA trim	4 mA reading 20 mA reading	No	This function recalibrates the laser transmitter current output loop based on the readings entered at 4 mA and 20 mA $$		
Relay settings	A group of settings and actions relate	d to the rel	ay outputs		
Relay A open	0.00 m (ft) to max range	Yes	Sets the distance at which the relay opens		
Relay A closed	0.00 m (ft) to max range	Yes	Sets the distance at which the relay closes		
Relay A test	open, closed	Yes	Toggles between relay open and relay closed		
Relay B open	0.00 m (ft) to max range	Yes	Sets the distance at which the relay opens		
Relay B closed	0.00 m (ft) to max range	Yes	Sets the distance at which the relay closes		
Relay B test	open, closed	Yes	Toggles between relay open and relay closed		
Application settings	A group of settings for filtering, smoo	thing and	adjusting to application conditions		
Program	Standard, Light dust, Heavy dust, Position, Custom	Yes	Select predefined settings for selected application Use custom program for user defined application settings		
Laser pointer	on off	No	Switch from service only mode (off - pointer comes on for 2 minutes at power up) to always on mode. All new LM200s are shipped set to off.		
Range Blank	0.00 m (ft) to max range	No	If signal is lost this range is output instead of the fail safe setting		
Resolution	High Low	No	High resolution is the normal setting, low resolution can be used for faster response at the expense of device resolution		
Measuring units	meters, feet	Yes	Select measuring units; either meters or feet		
Datum trim	-1.00 m (-3.28 ft) to 1.00 m (+3.28 ft)	Yes	Adjusts the zero datum point of the instrument. Factory default is from the front face of the flange (0.00 m).		
Setpoint limit	0.00 m (ft) to ~400 m (~1400 ft)	No	Adjusts the maximum range of the device. The firmware allows up to 2980 m but the hardware is only capable of about 400 m (1400 ft).		
Smoothing	Settings to adjust the filtering and sn	noothing of	the output for the custom program		
Pause	0 sec to 255 sec	No	Sets the time between reading updates		
Buffer	1 to 25	No	Sets the size of the rolling average buffer		
Keep	1 to buffer	No	Sets the number of readings to keep in the averaging buffer, readings are removed starting with the shortest readings		
Fill rate	0, 0.001 to 20000.000 units per minute	No	Sets the fastest filling speed expected, if zero the setting is not used. Otherwise, any sudden rise in level is smoothed by this setting.		
Empty rate	0, 0.001 to 20000.000 units per minute	No	Sets the fastest emptying speed expected, if zero the setting is not used. Otherwise, any sudden drop in level is smoothed by this setting.		
Environment	Normal Dust	No	"Normal" for most applications, uses fixed gain "Dust" uses variable gain to compensate for dusty conditions, is used in conjunction with fill rate		

## **Red laser pointer**

## Red laser pointer

The LM200 includes a red laser pointer (Class 3R) that enables easy and accurate alignment. Through the menu system, the pointer can be set to "On" or "Off". When set to "Off" the pointer will shine for 2 minutes at power on and when the unit is in the menu system. It is possible to change the behavior at power on using the advanced menus so that the laser pointer never shines except when in the menu system. When set to "On", the pointer will shine continuously when in the menu system and flash when the unit is taking measurements. The LM200 always ships from the factory with the pointer set to "Off".

### Mounting

The LM200 produces a narrow, straight measuring laser beam. The unit should be mounted facing towards the area to be measured with no obstacles directly in the beam path. Avoid mounting the instrument close to a stream of material that may fall in front of it. The LM200 has four diameter mounting holes to be bolted directly onto a flange or bracket with 4 M6 screws. The LM200 may receive stronger signals in subdued lighting and dark conditions than it does in direct sunlight. Check the operation over the full range of conditions to be measured after installing.

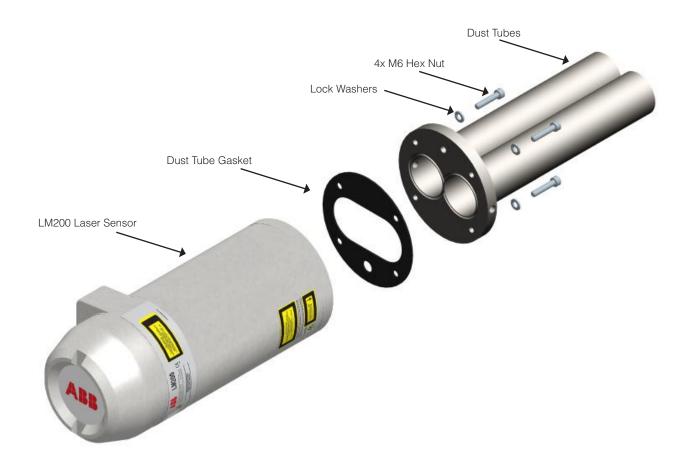

## Grounding

It is recommended to use a AWG 16 or 1.5 mm² wire for earth connection. For best results use a size 10 earth lug with a copper body terminal per ASTM B-152, and tin plating per MIL-T-10727, and a manufacturer AMP part No. 34112 or No. 34109. The earth wire terminated with the recommended earth lug must be connected to the designated terminal for this purpose. The internal and the external earth screws are made of stainless steel.

## Cables, wiring and routing

Always use shielded cables for power supply and signal. It is recommended to use a AWG16 or 1.5 mm² multi-core cable. The number of cores will depend upon the outputs required from the LM200. For a 4–20mA output, use a twisted pair shielded cable. Do not install the LM200 or route the signal cables in close proximity to high voltage electrical cables.

## **Dust management**

## **Dust management**

In applications where dust may be present (even in very small quantities) it is recommended that the P201 dust tube accessory be used. The LM200 has a 1/8 NPT fitting for dust management. The dust tube is a simple and effective device, designed to prevent dust settling on the lenses by creating a static airspace. When abundant dust is present the dust tube can additionally be purged with dry oil free air to further reduce any dust settling on the lens.

There are a number of advanced settings to improve performance when dust is present. The "Dust" setting in the "Environment" menu increases the dust penetration capabilities of the laser. In applications where the vessel may be loaded in batches and intermittent clouds of dust appear, a "Fill rate" may be entered to slow down the rate of response of the instrument.

## Standard precautions

The LM200 is designed to withstand many industrial environmental conditions. However, a few precautions will ensure reliable operation of the unit for extended periods of time:

- Do not drop the instrument.
- Do not open the terminal compartment lid when an explosive dust or gas atmosphere may be present.
- Do not connect to the RS232 port when an explosive dust or gas atmosphere may be present.
- Do not expose the internal electronics to water or dirt.
- Do not install or connect with the power on.
- Use appropriate insulated lugs or ferrules for connections to the terminal block and grounding screws.
- The flat stainless steel washer must be incorporated between the enclosure body and the lug to prevent corrosion from occurring.
- External transient protection of up to 40 % (44 V) of the maximum supply voltage (32 V x 1.4  $\leq$  44 V) should be incorporated in the power supply line to the equipment when used in hazardous areas.
- Always keep the terminal compartment lid seal clean and lightly lubricated with Vaseline® Petroleum Jelly.
- Ensure that the terminal compartment lid is tight after connections have been made.
- If using cable glands, only use glands that have been suitably certified by a notified body for cable entry into the enclosure. If in doubt use cable glands supplied by ABB.
- Ensure that the cable glands are tight after connecting the external cable.
- Do not install conduit so that it can drain into the LM200 terminal compartment.
- Remove dirt from the lenses with a clean, damp cloth only.
- Do not point the instrument at the sun.
- Avoid aiming the LM200 directly into the fill path of the vessel
- For liquids always mount the laser to aim perpendicular to the liquid surface.
