

Magnetic-inductive flow meter Wafer version Model FLC-1000EL

WIKA data sheet FL 20.02

Applications

- Water cycle
- Process applications

Special features

- Easy and time-saving installation
- Excellent price-performance ratio
- Electrodes from titanium, tantalum or platinum

Description

Magnetic-inductive flow meters are based on the Faraday principle, by which a conductor which traverses a magnetic field generates a potential oriented perpendicular to that field. The flow tube is enclosed by two flanges and also by two coils. The magnetic field which is generated by the electric current running through the coils induces a potential difference in the electrodes that is proportional to the flow being measured.

A WIKA signal converter, either attached directly to the instrument or separated from it (e.g. model FLC-608), generates the current to supply the magnetic coil, detects the potential difference between the electrodes, processes the signal to calculate the flow and manages communication with the external control systems.

The model FLC-1000EL has been developed for the accurate flow measurement of liquids and slurries that are difficult to quantify with other types of sensors.

The special wafer version enables easy installation between UNI 2223 flanges from PN 16 to PN 40 or between ANSI 150 and 300 flanges.

The measuring instrument has an excellent resistance to water, even with permanent immersion.

Specifications

Diameter and weight											
mm	25	40	50	65	80	100	125	150	200	250	300
in	1	1.5	2	2.5	3	4	5	6	8	10	12
Weight in kg ¹⁾	2.1	2.5	3.0	4.5	6.5	7.5	9.5	11.5	17	21	26

1) In separated version, without packaging

Specifications		
Compatible connecting flanges		
Per UNI 2223	PN 16 ... PN 40	
Per ANSI	<ul style="list-style-type: none"> ■ 150 ■ 300 	
Maximum pressure		
Diameter > DN 200	16 bar	
Diameter ≤ DN 150	40 bar	
Materials		
Sensor housing	Carbon steel, painted with acrylic	
Flow tube	Stainless steel AISI 304	
Electrodes	<ul style="list-style-type: none"> ■ Hastelloy C[®] ■ Titanium ■ Tantalum ■ Platinum 	
Flow tube lining ¹⁾	<ul style="list-style-type: none"> ■ PTFE (for pipe diameters DN 25 ... DN 100), on request also for DN > 100 ■ Hard rubber (ebonite) (for diameter ≥ DN 100 and for applications in the food industry) 	
Flow tube lining and medium temperature ²⁾	Flow tube lining	Medium temperature ³⁾
	PTFE	-40 ... +130 °C [-40 ... +266 °F] (-40 ... +180 °C [-40 ... +356 °F] on request)
	Hard rubber (ebonite)	-40 °C ... +80 °C [-40 ... +176 °F]
Painting of sensor housing and flange	Acrylic paint (painting for class C4 environments on request)	
Available flange standards	EN 1092-1, ANSI 150, ANSI 300, ANSI 600, ANSI 900, DIN 2501, BS 4504, AS 2129 (table D - E - F), AS 4087, ISO 7005-1, KS 10K	
Ingress protection per EN 60529	IP68 (continuous immersion to 1.5 m)	
Compatible signal converters	<ul style="list-style-type: none"> ■ Model FLC-608A/B/R/P/I ■ Model FLC-406 	
Electrical connection	Cable gland M20 x 1.5, terminal block and sealing resin	

1) Approvals for use in drinking water applications: WRAS, FDA, DPR 777/82 and DM 174.

2) The maximum permissible temperature of the process liquid is limited by the lining material.

3) Compact version T_{max}: 80 °C [176 °F]

Calibration and maximum measuring deviation

The sensors of the model FLC-1000EL belong to reference group B1 (per ISO 11631). Each sensor is wet-calibrated on a hydraulic test bench which is fitted with a reference weighting system and is SIT certified. The measuring deviation of the calibration is 0.2 % ±2 mm/s. The repeatability is 0.1 %.

Integration of the flow meter

The model FLC-1000EL sensors can be combined with all WIKA signal converters. In the separated version, the sensor is connected with the signal converter via a cable, whose length depends on the electric conductivity of the liquid. The maximum length of the cable is 100 m (30 m in combination with battery-operated electronics).

For pipe diameters \geq DN 40 [1.5"] a grounding electrode and an empty-pipe electrode (empty-pipe alarm) are supplied to detect partially filled flow tubes.
