ATE-2 Handheld Calibrator

STANDARD FUNCTIONS

- **Data logging** allows the user to save pressure, temperature and or electronic values displayed on the LCD to internal memory. Internal memory can hold up to 64 data log files and a total of up to 16,000 individual records. Manual logging is initiated with a single key press. Automatic data logging can be programmed to collect data at timed intervals between 0.1 second and 24 hours.
- **SD Memory Card Slot** gives the ATE-2 additional data storage capability limited only by the capacity of the SD card installed. Data logs stored on the SD card are saved in .csv format which can be read by most spreadsheet programs. Data can easily be transferred from the ATE-2 to a PC.
- **Loop Power Supply** is a standard feature on non-I.S. units and allows the user to conveniently power the device under test with 24 Vdc up to 35 mA
- **Percent Error Function** can be used when calibrating pressure transducers. Calculations are performed by the ATE-2 eliminating potential for human errors. This function enables the user to program the full scale range and electrical output of the transducer under test, and will display the actual pressure and electrical output readings as well as a percentage value comparing the actual output to the theoretical output.
- **Switch Test Function** allows the operator to calibrate and document the pressure switch function. The onboard display will show pressure switch trip point, reset point and will calculate switch deadband. All calculations are performed by the ATE-2 eliminating potential for human errors
- **Dual Mode Function** allows the operator to add or subtract the measured pressure values from two installed Quick-Select™ pressure modules. This allows for measurement of “high-line” or elevated static differential pressures. This feature also offers the ability to add barometric pressure from an absolute pressure module to the measured pressure from a gauge pressure module, giving the user the ability to measure a variety of absolute pressures without using designated modules.

- **Leak Detect** the ATE-2 provides the ability to detect and quantify leaks in terms of pressure decay over time. In the pressure decay over time mode the ATE-2 will monitor the desired pressure vessel for the programmed time interval and, at the end of the monitoring time period, display the measured change in pressure.

AM2-TC1 Thermocouple Temperature Modules

FEATURES

- Allows ATE-2 to measure temperature with a thermocouple
- Pre-programmed to accept 8 most common thermocouple types
- Displays measurement for Fahrenheit, Celsius, Kelvin Rankine and millivolts
- Reference junctions: automatic internal or manual external

PRODUCT SPECIFICATIONS:

AM2-TC1 THERMOCOUPLE TEMPERATURE MODULE

Unit of Measure (selectable):

°C, °F, °K, °R and millivolts

Reference Junction (selectable):

Automatic Mode: The AM2-TC1 module incorporates an internal resistor/thermistor based reference junction, which may be selected for use in the temperature readout mode.

Manual Mode:

An external reference junction may be used in place of the internal junction. External reference junctions may be applied in the temperature or direct millivolt readout modes.

Resolution Reading in Temperature Units (selectable):

1, .1 or .01 degrees. "Auto" mode selection that allows the ATE-2 to automatically configure the readout to the highest significant resolution (resolution closest to the tolerance) for the thermocouple type selected.

Resolution Reading in Millivolts:

.001 millivolts

Thermocouple Connection (to interface module):

Requires a "miniature thermocouple connector" (Omega type SMP), specifically matched to the thermocouple type to be used. These connectors may be purchased as an accessory using the specified part numbers (see how to order thermocouple connector table).

SYSTEM ACCURACY (READING IN TEMPERATURE UNITS):

Includes the base unit and AM2-TC1 interface module. (Does not include inaccuracy of the thermocouple device. Consult thermocouple manufacturer or ANSI MC96.1 for thermocouple accuracy specifications. Typical inaccuracies range from ±1 to ±2.2 °C.)

Conversion Factors to convert °C specifications to other units of measure:

To convert from C to F; $F = (1.8 \times C) + 32$

To convert from C to K; $K = C + 273.15$

To convert from C to R; $R = (1.8 \times C) + 427.6$
